

# 2021 G7 Cornwall Summit Final Compliance Report

14 June 2021 to 11 June 2022

Prepared by  
Matthew Kieffer and Gabrielle Regimbal  
and the G7 Research Group

23 June 2022

[www.g7.utoronto.ca](http://www.g7.utoronto.ca)  
[g7@utoronto.ca](mailto:g7@utoronto.ca)  
[@g7\\_rg](https://twitter.com/g7_rg)

“We have meanwhile set up a process and there are also independent institutions monitoring which objectives of our G7 meetings we actually achieve. When it comes to these goals we have a compliance rate of about 80%, according to the University of Toronto. Germany, with its 87%, comes off pretty well. That means that next year too, under the Japanese G7 presidency, we are going to check where we stand in comparison to what we have discussed with each other now. So a lot of what we have resolved to do here together is something that we are going to have to work very hard at over the next few months. But I think that it has become apparent that we, as the G7, want to assume responsibility far beyond the prosperity in our own countries. That’s why today’s outreach meetings, that is the meetings with our guests, were also of great importance.”

Chancellor Angela Merkel, Schloss Elmau, 8 June 2015

G7 summits are a moment for people to judge whether aspirational intent is met by concrete commitments. The G7 Research Group provides a report card on the implementation of G7 and G20 commitments. It is a good moment for the public to interact with leaders and say, you took a leadership position on these issues — a year later, or three years later, what have you accomplished?

Achim Steiner, Administrator, United Nations Development Programme,  
*in G7 Canada: The 2018 Charlevoix Summit*

| Average        |               | +1.00 (100%)       |                 |

### Background

On 13 June 2021, at the Cornwall Summit, G7 leaders committed to “support and drive the protection, conservation and restoration of ecosystems critical to halt and reverse biodiversity loss and environmental degradation, and to tackle climate change.”<sup>1452</sup> The G7 Leaders’ pledge to take the necessary actions required to achieve their goal to “halt and reverse biodiversity loss by 2030” builds on the G7 Metz Charter on Biodiversity and the Leader’s Pledge for Nature. Additionally, the commitment is a step towards meeting Sustainable Development Goals and promoting a “green, inclusive and resilient recovery from COVID-19.”

On 17 March 2007, at the G8 Environment Ministers Meeting, G8 leaders called for an economic analysis of the cost of biodiversity loss compared to the cost of conservation efforts, including supporting research, enforcing the protection of protected marine areas, preventing and controlling invasive species, combating illegal wildlife trade, and promoting production and consumption habits compatible with halting and reversing biodiversity loss.<sup>1453</sup> The Potsdam Initiative: Biological Diversity 2010 called for an integration of climate and biodiversity policies and underlined the “global economic benefit of biological diversity.”

On 26 May 2008, the 2008 Kobe Call for Action for Biodiversity produced by the G8 Environment Ministers Meeting reiterated the urgency of achieving the goals outlined by the Potsdam Initiative: Biological Diversity 2010.<sup>1454</sup> In addition, G8 leaders emphasized the need for international scientific and political collaboration, “sustainable forest management,” and increased engagement with the private sector.

On 24 April 2009, the “Carta di Siracusa” on Biodiversity issued by G8 Environment Ministers called for the use of investments in green infrastructure as a strategy to tackle both biodiversity loss and the Great Recession, and outlined a “post-2010 framework on biodiversity.”<sup>1455</sup>

<sup>1454</sup> G8 Environment Ministers Meeting: 2008 Kobe Call for Action for Biodiversity, G7 Information Centre (Toronto) 26 May 2008. Access Date: 26 September 2021. <http://www.g7.utoronto.ca/environment/env080526-BD.html>

<sup>1455</sup> “Carta di Siracusa” on Biodiversity, G7 Information Centre (Toronto) 24 April 2009. Access Date: 26 September 2021.

<http://www.g7.utoronto.ca/environment/env090424-biodiversity.pdf>

On 26 June 2010, at the Muskoka Summit, G8 leaders expressed regret at the international community's failure to meet its 2010 biodiversity loss target and called for a strengthened "science-policy interface" to tackle biodiversity loss, expressing support for the establishment of an "Intergovernmental Platform on Biodiversity and Ecosystem Services."<sup>1456</sup>

On 27 May 2011, at the Deauville Summit, G8 leaders called for "green growth" to tackle climate change and biodiversity loss and committed to "[intensify] efforts to slow the loss biodiversity."<sup>1457</sup>

On 8 June 2015, at the Elmau Summit, the G7 Elmau Progress Report was released, examining the progress made by G7 leaders in slowing the loss of biodiversity since the Deauville Summit in 2011.<sup>1458</sup> The report touted G7 countries' record on bilateral biodiversity aid, measures taken to "directly conserve biodiversity" such as "fighting poaching, illegal logging and wildlife trafficking" and to tackle the direct and indirect drivers of biodiversity loss. The report outlined the path toward future preservation of biodiverse ecosystems through more effective use and expanded sources of funds, and through connecting biodiversity loss with other development commitments.

On May 6 2019, the Metz Charter on Biodiversity issued by G7 leaders recognized the need for urgent, accelerated and intensified action to halt and reverse biodiversity loss.<sup>1459</sup> The Metz Charter outlines the "co-benefits" of combating biodiversity loss "with regard to other global challenges ... including climate change, ecosystem degradation and natural disasters," and underscores the need for equitable, nature-based and multilateral environmental governance.

The G7 2030 Nature Compact report underlines that climate change is a key driver of biodiversity loss, and that in order to mitigate the effects of climate change, it is necessary to "protect, conserve and restore biodiversity."<sup>1460</sup> G7 leaders have recognized that a key factor to any nation's sustainable development and economic growth is its reliance on a healthy climate and strong biodiversity. Moreover, with the ongoing COVID-19 pandemic and its impacts on public health, the economy, food systems and the environment, the G7 2030 Nature Compact report reaffirms that "the mission to tackle biodiversity loss" will help tackle a number of other important issues, including but not limited to, animal health, the prevention of future pandemics and the protection of human life and wildlife. In addition, the G7 Nature Compact report reaffirms its commitment to the G7 One Health Working Group and the International Zoonose Community of Experts (IZCE). The "One Health" approach works to integrate policy concerning human and animal health and the environment, particularly with respect to the response to the COVID-19 pandemic.<sup>1461</sup> The IZCE is "a voluntary initiative that will consist of G7 and guest countries' experts in zoonotic disease, drivers of emerging disease, and biodiversity loss from across government agencies, to facilitate international collaboration and capacity building, surveillance and analysis and improved technology."<sup>1462</sup>

## Commitment Features

At the 2021 Cornwall Summit, G7 leaders committed to “support and drive the protection, conservation and restoration of ecosystems critical to halt and reverse biodiversity loss and environmental degradation, and to tackle climate change.”<sup>1463</sup> The G7 2030 Nature Compact details “new global targets to conserve or protect at least 30 [per cent] of global land and at least 30 [per cent] of the global ocean by 2030,” and encourages the creation and delivery of targets “to prevent the loss, fragmentation and degradation of ecosystems and to restore significant areas of degraded and converted ecosystems.” G7 leaders also called for international cooperation to promote biodiversity through “significantly [reducing] overall extinction risk and eventually [stopping] human-induced extinctions,” particularly with respect to protecting oceans “outside of national jurisdiction.”

Thus, the G7 2030 Nature Compact outlines three spheres in which strong action is required to tackle biodiversity loss, and in turn, climate change: protecting and conserving ecosystems, restoring ecosystems, and halting and reversing biodiversity loss and environmental degradation.<sup>1464</sup> Biodiverse ecosystems are resilient, able to provide ecosystem services in the face of climatic hazards.<sup>1465</sup> The degradation of biodiverse ecosystems emits vast quantities of carbon dioxide into the atmosphere, destroys valuable carbon stocks, and reduces their capacity for carbon sequestration. Thus, halting and reducing biodiversity loss is a crucial element of the fight against climate change.

“Support” is understood to describe “the action, or act of providing aid, assistance, or backing up an initiative, or entity,” in this instance, halting or reversing biodiversity loss.<sup>1466</sup>

“Drive” is understood to mean “to compel to undergo ... a change,” in this instance, halting or reversing biodiversity loss.<sup>1467</sup>

“Protection” is understood to mean “to cover or shield from exposure, injury, damage, or destruction,” in this instance, global land and ocean ecosystems.<sup>1468</sup>

“Conservation” is understood to describe “a careful preservation and protection of something,” in this instance, “planned management of [natural resources] to prevent exploitation, destruction, or neglect.”<sup>1469</sup>

“Restoration” is understood to describe “a bringing back to a former position or condition.”<sup>1470</sup> The commitment outlines the necessity of degraded and/or converted ecosystems to be restored to their pre-degradation and/or pre-conversion conditions.

“Ecosystem” is understood to describe “all living things (plants, animals and organisms) in a given area, as well as their interactions with each other, and with their non-living environments (weather, earth, sun, soil, climate, atmosphere).”<sup>1471</sup>

<sup>1467</sup> Drive, Merriam-Webster (Springfield) 18 February 2021. Access Date: 26 September 2021. <https://www.merriam-webster.com/dictionary/drive>

<sup>1468</sup> Protect, Merriam-Webster (Springfield) 18 February 2021. Access Date: 26 September 2021. <https://www.merriam-webster.com/dictionary/protect>

<sup>1469</sup> Conservation, Merriam-Webster (Springfield) 18 February 2021. Access Date: 26 September 2021. <https://www.merriam-webster.com/dictionary/conservation>

<sup>1470</sup> Restoration, Merriam-Webster (Springfield) 18 February 2021. Access Date: 26 September 2021. <https://www.merriam-webster.com/dictionary/restoration>

“Halting” is understood to mean to “discontinue” or to “terminate,” and “reversing”, in this context, refers to the act of “undoing or negating the effect of something.”<sup>1472</sup>

“Biodiversity” is understood to describe “the variety of life on Earth and the natural patterns it forms.”<sup>1473</sup> The commitment seeks to facilitate international cooperation to develop institutions and systems that will protect and conserve existing biodiverse ecosystems, while restoring ecosystems whose biodiversity has decreased as a result of degradation or conversion to other land uses.

“Environmental degradation” is understood to describe “the deterioration in environmental quality from ambient concentrations of pollutants and other activities and processes such as improper land use and natural disasters.”<sup>1474</sup>

“Climate change” is understood to describe “a change of climate which is attributed directly or indirectly to human activity that alters the composition of the global atmosphere and which is in addition to natural climate variability observed over comparable time periods.”<sup>1475</sup>

This commitment has a depth component examining the strength of actions taken by each G7 member. A G7 member must take strong action in multiple spheres to achieve full compliance.

Strong domestic actions may include, but are not limited to: policy action, domestic legislation, allocation of funding, and/or changes to monetary policy designed to precipitate increased biodiversity and support the conservation, protection, and restoration of land and ocean ecosystems, the establishment of a new committee, task force, or other institutional mechanism to examine biodiversity loss, funding of research into biodiversity loss, or direct actions towards greater conservation, protection, and restoration of domestic land and water. Weak actions on the domestic level include verbal reaffirmation of the commitment or attending meetings that discuss biodiversity loss.

Strong international actions include the provision of international financial support (either directly or through international institutions), or participating, joining, or financing organizations addressing biodiversity loss. Weak actions at the international level include information sharing and development of international legislation, including participation in negotiations for an “international legally binding instrument under the UN Convention on the Law of the Sea (UNCLOS) on the conservation and sustainable use of marine biological diversity of areas beyond national jurisdiction.”<sup>1476</sup>

Strong actions related to the protection and conservation of ecosystems may include the creation of new protected lands, new legislation that prohibits actions that degrade the environment, or legislation restricting the extraction of natural resources that would lead to the loss of biodiversity or exacerbate the climate crisis.

<sup>1475</sup> United Nations Framework Convention on Climate Change, United Nations (New York, Rio de Janeiro) 9 May 1992. Access Date: 26 September 2021.

[https://unfccc.int/files/essential\\_background/background\\_publications\\_htmlpdf/application/pdf/conveng.pdf](https://unfccc.int/files/essential_background/background_publications_htmlpdf/application/pdf/conveng.pdf)

<sup>1476</sup> G7 2030 Nature Compact, G7 Information Centre (Toronto) 13 June 2021. Access Date: 25 September 2021.

<http://www.g7.utoronto.ca/summit/2021cornwall/210613-nature-compact.html>

Strong actions related to the restoration of ecosystems may include the implementation of programs to improve water, soil, or air quality, initiatives to introduce a species whose population had decreased as a result of human degradation.

Strong actions related to the reversal of biodiversity loss and environmental degradation may include new legislation banning a practice that degrades the environment, initiatives to prevent surface runoff from contaminating ecosystems, initiatives to remedy the damage caused by historic contamination, the planting of new trees, or any other action increasing the biodiversity of an ecosystem.

With this commitment, the leaders of the G7 recognize the significance and the urgency that the reversal of biodiversity loss has on climate change and other issues of domestic and international importance. In order to receive full compliance, a state must demonstrate that it has taken the necessary action to tackle biodiversity loss and climate change.

To achieve full compliance, the G7 member can take strong actions in two spheres and some action in one sphere to halt and reverse biodiversity loss: protecting and conserving ecosystems, restoring ecosystems, and halting and reversing biodiversity loss and environmental degradation. Alternatively, the G7 member can take strong action in all three aforementioned spheres to tackle biodiversity loss and climate change.

For a score of partial compliance, the G7 member has taken strong action in one sphere and some actions in the other two spheres to halt and reverse biodiversity loss: protecting and conserving ecosystems, restoring ecosystems, and halting and reversing biodiversity loss and environmental degradation. Alternatively, the G7 member can take strong actions in at least one of the three aforementioned spheres to halt and reverse biodiversity loss.

For a score of non-compliance, the G7 member has completed less than the aforementioned criteria.

### Scoring Guidelines

|    |  |
|----|--|
| -1 | The G7 member has NOT taken strong steps to halt and reverse biodiversity loss in ANY of the following three spheres: protecting and conserving ecosystems, restoring ecosystems, and halting and reversing biodiversity loss and environmental degradation, OR the G7 member has taken weak steps in only ONE of the three spheres.                             |
| 0  | The G7 member has taken strong steps to halt and reverse biodiversity loss in at least ONE of the following three spheres: protecting and conserving ecosystems, restoring ecosystems, and halting and reversing biodiversity loss and environmental degradation, OR the G7 member has taken strong steps in ONE sphere and weak steps in the other TWO spheres. |
| +1 | The G7 member has taken strong steps to halt and reverse biodiversity loss in ALL of the following three spheres: protecting and conserving ecosystems, restoring ecosystems, and halting and reversing biodiversity loss and environmental degradation, OR the G7 member has taken strong steps in at least TWO spheres and weak steps in ONE other sphere.     |

Lead Analyst: Ali Nadhum*

### Canada: +1

Canada has fully complied with its commitment to support and drive the protection, conservation and restoration of ecosystems critical to halt and reverse biodiversity loss and environmental degradation and to tackle climate change.

On 23 July 2021, Environment and Climate Change Canada announced upwards of CAD25 million “in funding to enhance, conserve and restore critical wetlands and grasslands in Prairie provinces,” including funding for Ducks Unlimited Canada (CAD19.28 million), Nature Conservancy of Canada (CAD4.05 million)

and the Manitoba Habitat Heritage Corporation (CAD2.4 million).<sup>1477</sup> These organizations aim to restore croplands, grasslands and wetlands in the Prairie provinces while supporting wildlife habitat.

On 18 July 2021, Minister of Seniors Deb Schulte announced on behalf of then Minister of Environment and Climate Change Jonathan Wilkinson CAD9 million in funding for grassland and wetland conservation projects led by Conservation Ontario and other regional conservation authorities.<sup>1478</sup>

On 12 August 2021, Parliamentary Secretary to Minister of Environment and Climate, Terry Duguid, signed a ten-year Memorandum of Understanding (MOU) with Manitoba's Minister of Agriculture and Resource Development Ralph Eichler to renew their commitment to collaborate on the conservation of Lake Winnipeg.<sup>1479</sup> The protection of water quality and engagement with Indigenous stakeholders were priorities of the new MOU.

On 12 August 2021, Environment and Climate Change Canada announced an investment of up to CAD340 million to support Indigenous-led conservation efforts.<sup>1480</sup> The support includes collaboration with Indigenous leaders to utilize their perspectives for habitat protection and conservation of biodiverse ecosystems.

On 13 August 2021, Environment and Climate Change Canada announced funding of up to CAD796 million to protect nature nationally.<sup>1481</sup> The investment comes as part of the "Enhance Nature Legacy" launched by the government "to support territories, provinces and other partners' actions to recover species at risk and conserve and protect freshwater and lands."

On 6 November 2021, Environment and Climate Change Canada announced increased investment in nature protection to tackle climate change and biodiversity loss.<sup>1482</sup> This target involves protecting 25 per cent of Canadian lands and oceans by 2025 and "working toward" 30 per cent by the year 2030. The federal government also announced an investment of CAD460 million to "protect and expand 22 of Canada's national wildlife areas."

On 6 November 2021, Minister of Environment and Climate Change Steven Guilbeault announced at the United Nations COP26 conference in Glasgow, Scotland that the federal government planned to allocate 20 per cent of its international climate finance funding to help combat biodiversity loss in developing countries

<sup>1482</sup> The Government of Canada increases nature protection ambition to address dual crises of biodiversity loss and climate change, Environment and Climate Change Canada (Ottawa) 6 November 2021. Access Date: 18 January 2022. <https://www.canada.ca/en/environment-climate-change/news/2021/11/the-government-of-canada-increases-nature-protection-ambition-to-address-dual-crises-of-biodiversity-loss-and-climate-change.html>

over the next five years.<sup>1483</sup> Funding will focus on the development of nature-based solutions to support the restoration and preservation of wetlands and other carbon-rich ecosystems.

On 4 December 2021, Parks Canada announced a five-year investment of CAD14.7 million in conservation projects at five mountain national parks.<sup>1484</sup> Funding will be allocated to mountain national parks struggling with aquatic invasive species, particularly invasive mussels: Waterton Lakes, Kootenay, Banff, Jasper and Yoho.

On 7 December 2021, Environment and Climate Change Canada announced funding of CAD200 million to projects supporting the reduction of Canada's greenhouse gas emissions.<sup>1485</sup> Funding will be allocated to projects focused on "conserving, restoring and enhancing the management of critical ecosystems" to tackle climate change.

On 8 December 2021, Minister Guilbeault announced three-year funding of more than CAD3.1 million to support the Great Lakes Protection Initiative.<sup>1486</sup> The Great Lakes Protection Initiative's projects support the restoration of Great Lakes freshwater ecosystems and water quality. Minister Guilbeault's announcement emphasizes the initiative's "engagement with Indigenous Peoples and the public."

On 8 December 2021, Environment and Climate Change Canada announced funding for habitat protection of species at risk.<sup>1487</sup> CAD5.4 million will be allocated to conservation projects managed by the Aboriginal Fund for Species at Risk and the Habitat Stewardship Program.

On 15 December 2021, Fisheries and Oceans Canada launched a call for proposals to support marine conservation efforts across Canada.<sup>1488</sup> The Oceans Management Contribution Program will facilitate the call for proposals and provide access to at least CAD5 million in funding to successful proposals.

On 17 December 2021, Minister Guilbeault announced funding of nearly CAD5 million to support the EcoAction Community Funding Program.<sup>1489</sup> The EcoAction Community Funding Program funds projects of non-profit and non-governmental organizations supporting the restoration and protection of freshwater ecosystems and water quality.

On 6 April 2022, the Governments of Canada, Newfoundland and Labrador committed to “accelerate the creation of new protected areas in the province.”<sup>1490</sup> They agreed to work together to halt biodiversity loss through the establishment of the Eagle River Watershed protected area, advancement of marine conservation opportunities on the Labrador Coast and negotiation of a “memorandum of understanding[...] to assess the feasibility of a South Coast Fjords national marine conservation area and consider an adjacent national park in the Burgeo region.”

On 14 April 2022, Minister Guilbeault announced CAD547.5 million in funding to create a “new purchase incentive program for medium and heavy-duty zero-emission vehicles to help businesses upgrade their fleets.”<sup>1491</sup> Minister Guilbeault’s announcement is part of a broader initiative to make zero-emission vehicles more affordable for Canadians and Canadian businesses.

On 21 April 2022, Member of Parliament for Halifax, Andy Fillmore, on behalf of Minister Guilbeault, announced CAD554,745 in funding for three initiatives to address water-quality issues in the Southern Gulf of St. Lawrence and the Wolastoq/Saint John River watersheds.<sup>1492</sup> The funding from Atlantic Ecosystems Initiatives will allow three Nova Scotia-based organizations “to lead clean water initiatives to help protect Canada’s environment from pollutants such as plastics and harmful bacteria.”

On 22 April 2022, the Governments of Canada and Ontario committed to “support the conservation and recovery of boreal caribou in Ontario.”<sup>1493</sup> Federal-provincial cooperation will facilitate habitat restoration, establishment of protected areas, monitoring and reporting on habitat conditions and engagement with “independent experts, Indigenous communities and organizations and stakeholders” to protect the threatened boreal caribou.

On 6 June 2022, Minister Guilbeault announced the creation of the Nature Advisory Committee. This committee is tasked with providing “strategic advice” to the Government of Canada on subjects related to biodiversity conservation and sustainable use of land.<sup>1494</sup>

On 7 June 2022, Minister Wilkinson announced that the Government of Canada will provide USD2.4 million in funding to the 2 Billion Trees Program. This funding intends to replant trees across Canada and restore biodiversity in previously damaged areas.<sup>1495</sup>

On 8 June 2022, Minister Murray announced USD2.1 million in funding to eight oceanic science projects in Canada. Also, Canada is protecting another national habitat through the creation of the Eastern Canyons Marine Refuge near Nova Scotia.<sup>1496</sup>

On 9 June 2022, Prime Minister Trudeau signed a new deal with the state of California to encourage cooperation between both governments and private businesses. This cooperation will take the form of technology and information sharing which will allow Canada and California to work together on combating climate change and preserving habitats.<sup>1497</sup>

Canada has fully complied with its commitment to halt and reverse biodiversity loss. Canada has taken strong action to protect, conserve and restore ecosystems and to reverse biodiversity loss, including strong investment in Indigenous-led conservation efforts and the development of targeted initiatives for high-risk biodiverse ecosystems.

Thus, Canada receives a score of +1.

*Analyst: Julian Lam*

### **France: +1**

France has fully complied with its commitment to support and drive the protection, conservation and restoration of ecosystems critical to halt and reverse biodiversity loss and environmental degradation and to tackle climate change.

On 28 June 2021, the Government of France submitted a national plan for public consultation regarding measures to halt the decline of pollinating insects and preserve these species and their environment.<sup>1498</sup> The initiative highlights the essential role of pollinators in reproduction of plant species, supporting wider efforts to halt biodiversity loss.

On 5 September 2021, Secretary of State for Biodiversity Bérandère Abba recognized the Bay of Audierne, a popular summer tourist destination in Finistère, France, as a wetland of international importance under the Ramsar Convention.<sup>1499</sup> The Bay of Audierne experiences a high influx of tourists in summer months. Home to more than 1,000 animal species, the biodiverse Bay of Audierne will be protected from ecological degradation and pollution.

On 6 September 2021, Secretary Abba announced the creation of five new nationally protected areas.<sup>1500</sup> These protected areas include the creation of a Roche Grande integral reserve comprised of the Mercantour National Park and Provence-Alpes-Côte d'Azur; a significant extension of the Iroise National Nature Reserve; the creation of the Corbières Fenouillèdes Regional Natural Park (Occitanie); the creation of the Regional Natural Park of Doubs Horloger (Bourgogne Franche-Comté) and the extension of the Natura 2000 site of the Mue valley (Normandy). The initiative will reduce the threat of environmental degradation and contribute to the preservation of biodiversity in the aforementioned ecosystems.

On 5 October 2021, Secretary Abba renewed France’s commitment to protecting marine biodiversity at the Convention for the Protection of the Marine Environment of the North-East Atlantic (OSPAR).<sup>1501</sup> In a joint effort with other OSPAR member states, France pledged to create a new international marine protected area in the North Atlantic Current of the Evlanov basin. The initiative will protect this region’s ecosystem, which serves as an important feeding ground for many species of seabirds and as a marine passage for migratory species.

On 8 October 2021, Secretary Abba reaffirmed France’s commitment to restoring the ecological continuity of the Rhine.<sup>1502</sup> France pledged EUR80 million for the construction of two new river passages. The initiative will contribute to the restoration of proper circulation of Rhine aquatic species unable to reach spawning grounds in recent years as a result of human development. Circulation of aquatic species is necessary to ensure genetic mixing and foster resilient, biodiverse river ecosystems.

On 25 October 2021, Secretary Abba launched an initiative to “identify sites of national interest likely to host a twelfth national park, dedicated to wetlands.”<sup>1503</sup> In addition, Secretary Abba recognized the Pinail site in Vienne, France as a wetland of international importance under the Ramsar Convention. Secretary Abba’s announcement highlighted the importance of ecosystem services provided by biodiversity wetlands in mitigating climate change and natural disasters. The creation of a new national park would enhance protection of wetland ecosystems’ biodiversity.

On 4 November 2021, Minister for Europe and Foreign Affairs Jean-Yves Le Drian attended the 26th Conference of the Parties (COP26) to the United Nations Framework Convention on Climate Change tomorrow.<sup>1504</sup> At this international meeting, France aided in finalizing international legislation for the COP26 commitment to cap global warming at 2°C. Furthermore, France reaffirmed its commitment to allocating EUR6 billion per year to accelerate decarbonization in emerging countries and tackle climate change.

On 12 November 2021, Minister for Ecological Transition Barbara Pompili, Minister for Europe and Foreign Affairs Jean-Yves Le Drian, and Minister for the Economy, Finance and of the Recovery Bruno Le Maire jointly announced France’s decision to end foreign public funding of fossil energy projects by the end of 2022.<sup>1505</sup> The joint announcement will reduce France’s carbon footprint and decarbonize its export financing. Atmospheric pollution and destruction of biodiverse ecosystems from fossil fuel extraction and use contribute to biodiversity decline.

On 23 November 2021, Secretary Abba and Minister of the Overseas Sébastien Lecornu began public consultation of the draft decree for a second extension to the National Nature Reserve of the French

Southern Territories.<sup>1506</sup> This second extension plans to protect the exclusive economic zones of Saint-Paul and Amsterdam, Crozet and Kerguelen, which remain ecologically rich, containing highly biodiverse marine mammal populations and the world's largest population of seabirds. This joint initiative will ensure the continued protection of biodiversity in these territories.

On 11 February 2022, President Macron announced the extension of the National Nature Reserve (RNN) of the French Southern Territories (TAF).<sup>1507</sup> The RNN of the TAF will extend to “all areas of the Crozet and Kerguelen archipelagos and the Saint-Paul and Amsterdam islands administered by the French Southern and Antarctic Lands.” This extension will create the largest marine protected area in France and serve as an ecological harbour for the reproduction, feeding and habitat of species.

On 11 February 2022, President Macron chaired the One Ocean Summit and hosted more than 40 countries in discussions surrounding the protection of the ocean.<sup>1508</sup> France prioritized forwarding measures committed to end plastic pollution, halt illegal or bad fishing practices and protect marine biodiversity.

On 2 March 2022, the General Directorate for Maritime Affairs, Fisheries and Aquaculture (DGAMPA) was announced under the authority of the Minister for the Sea and the Minister for Agriculture and Food.<sup>1509</sup> The DGAMPA will oversee the development of sustainable maritime fishing practices and ensure increased protection of France's marine environments.

On 15 March 2022, the Secretary of State Bérangère Abba announced a new national plan for protecting and restoring wetlands.<sup>1510</sup> The new plan will protect 18 richly biodiverse wetland sites identified by the General Council for the Environment and Sustainable Development. This initiative to more intensely protect wetlands demonstrates France's commitment to maintaining biodiversity through concrete action and halting climate change through preserving climate-regulating peat bogs found in wetlands.

France has made strong efforts to strengthen the protection and conservation of biodiversity through its pollinators initiative and the creation of new protected lands and marine environments. Additionally, France's attention to reversing the environmental degradation along the Rhineland is significant to its ecological continuity. France has also taken action towards tackling climate change by allocating funds to accelerate decarbonization in emerging countries and reaffirming its commitment to cap global warming at 2°C at the international concert.

Thus, France has received a score of +1.

## Germany: +1

Germany has fully complied with its commitment to support and drive the protection, conservation and restoration of ecosystems critical to halt and reverse biodiversity loss and environmental degradation and to tackle climate change.

On 16 July 2021, then Parliamentary State Secretary for Environment, Nature Conservation, Building and Nuclear Safety Rita Schwarzelühr-Sutter announced the German target for climate-neutrality would be moved forward to 2045.<sup>1511</sup> The announcement came at the High-level Political Forum on Sustainable Development and included a discussion of the negative implications of COVID-19 on biodiversity and the climate crisis. This announcement reflects Germany's commitment to promoting a green and resilient recovery from COVID-19.

On 7 September 2021, Federal Development Minister Gerd Müller hosted representatives of the ten countries around the Congo Basin at the Berlin Tropical Forest Symposium. Germany committed to increasing its support for the tropical forest countries in Central Africa.<sup>1512</sup> Furthermore, representatives from Germany and the ten countries jointly signed the Declaration on the Protection of the Congo Basin Rainforest. This declaration outlines greater forest protection measures and aims to protect and restore 127 million hectares of forest by 2030.

On 11 September 2021, 40 farms in Lower Saxony announced they would join the project KOOOPERATIV, which promotes biodiversity at the landscape level.<sup>1513</sup> The project is a part of the Federal Biological Diversity Program and is funded by the Federal Agency for Nature Conservation. The Federal Biological Diversity Program provides funding for sustainable agri-environmental measures and thus halts any further loss of biological diversity caused by disruptive farming practices.

On 11 October 2021, Federal Environment Minister Svenja Schulze emphasized the urgency of restoration for degraded ecosystems at the 15th meeting of the Conference of the Parties to the Convention on Biological Diversity (COP15).<sup>1514</sup> The main priorities advocated by Germany during negotiations for the mandated goals of COP15 included a push for 30 per cent of the Earth's terrestrial and marine area to be protected by 2030, a decrease in environmental pollution and restoration of degraded ecosystems to halt the global loss of biodiversity.

On 20 October 2021, the Baltic Marine Environment Protection Commission, which currently operates under the chairmanship of Germany, presented the Baltic Sea Action Plan for the 2021-2030 period.<sup>1515</sup> The aims of the plan include reducing beach waste by 50 per cent, improving the protection of marine species, and maintaining "one-third of the Baltic Sea under strict protection and management by 2030." The joint initiative with other Baltic Sea countries mitigates challenges affecting the Baltic Sea marine life and ecosystems.

On 1 November 2021, Federal Chancellor Angela Merkel announced that Germany will join the High Ambition Coalition for Nature and People (HAC) and support its goal of protecting 30 per cent of the planet's land and ocean by 2030.<sup>1516</sup> This initiative aims to create a global system of protected ecosystems and thus conserve biodiversity. In addition, under the German Council Presidency, the European Union will also adopt the HAC's target goal.

On 11 November, the Federal Ministry for the Environment, Nature Conservation, Nuclear Safety and Consumer Protection announced the German government would increase its multilateral commitment to adaptation finance by EUR150 million directed to the Global Environment Facility fund for least developed countries.<sup>1517</sup> The Least Developed Countries Fund of the Global Environment Facility funds climate change adaptation measures including those safeguarding against biodiversity loss.

On 24 November 2021, the Federal Ministry for the Environment, Nature Conservation, Nuclear Safety and Consumer Protection allocated EUR4.5 million in funding to two research projects that intend to test climate-friendly alternatives to the use of fossil fuels in the glass industry.<sup>1518</sup> This funding supports the decarbonization of energy-intensive industrial sectors in Germany and development of manufacturing practises in accordance with biodiversity and climate change targets.

On 20 December 2021, Federal Environment Minister Steffi Lemke and State Secretary Patrick Graichen attended the EU Environment Council to discuss issues of climate and environmental protection.<sup>1519</sup> Germany supported legislative proposals for the Fit for 55 package, which aims to reduce the EU's emissions. Other matters discussed and supported by Germany included battery regulation with environmental and climate protection criteria and EU soil and biodiversity strategy.

On 18 January 2022, the BMUV agreed on strengthening the Natural Climate Protection Action Program at the annual German Federal Ministry for the Environment, Nature Conservation, Nuclear Safety and Consumer Protection agricultural congress.<sup>1520</sup> This initiative serves to reorient agricultural policy as a more natural process. By reducing the use of pesticides and having glyphosate be taken off the market by the end of 2023, Germany will promote the restoration of nature's natural resilience.

On 28 January 2022, Federal Minister of Food and Agriculture Cem Özdemir attended the the Global Forum for Food and Agriculture and affirmed alongside other Agricultural Ministers and representatives from international organisations to halting soil degradation.<sup>1521</sup> The agreed upon measures for achieving this aim include supporting sustainable pest management, soil nutrient management, halting deforestation and

implementing guidelines for the Responsible Governance of Tenure of Land, Fisheries and Forests issued by the Committee on World Food Security. Germany's commitment to agri-ecological practices for restoring degraded soil will further preserve soil biodiversity and mitigate climate change through the process of healthy soil sequestering carbon emissions.

On 2 February 2022, the BMUV reaffirmed its commitment to supporting biodiverse ecosystems and highlighted its plan to use EUR32 million in funding to launch four new projects for the protection of wetlands and peatlands.<sup>1522</sup> The four new projects entail investing and safeguarding biodiverse ecosystems found in the peatlands of the Congo Basin and the peatlands of the Cuvette Centrale in Central Africa.

On 9 February 2022, plans by the MBUV and the Federal Agency for Nature Conservation to expand protected areas in the German Baltic and North Seas to 30 per cent of their total combined area came into effect.<sup>1523</sup> The Federal Agency for Nature Conservation plans to “take all necessary steps[...] to reduce underwater noise, reduce pollutant inputs, restore reefs [and] research more nature-friendly fishing methods.”

On 3 March 2022, the BMUV and the United Nations Environment Programme and the Secretariat of the Convention on Biological Diversity jointly established a Multi-Partner Trust Fund of EUR50 million to accelerate the implementation of the Convention on Biological Diversity Global Action Plan outlined during the summer of 2021.<sup>1524</sup> The fund emphasizes the importance of supporting biodiversity to further understand the interconnectedness of nature, human-wellbeing and the prevention of future pandemics.

On 4 March 2022, Federal Environment Minister Steffi Lemke attended the United Nations Environment Assembly (UNEA) and pledged Germany's continued cooperation with the UNEA for increased environmental protection.<sup>1525</sup> The UNEA highlighted the importance of adopting international mandates on curbing plastic waste pollution and mitigating the impacts of environmental pollution. Germany's commitment to a multilateral approach with the UNEA extends its responsibility for addressing environmental degradation to a global scale, thus benefiting ecosystems beyond its domestic territorial borders.

On 7 March 2022, the BMUV and the Federal Agency for Nature Conservation announced a new nature conservation project worth EUR4 million in the western Allgäu.<sup>1526</sup> The project aims to protect the hotspots of biodiversity found in this region through investing in nature conservation measures, opening dialogue between stakeholders involved in the region and restoring wet habitats and moor areas.

On 22 March 2022, BMUV Parliamentary State Secretary Bettina Hoffmann, and the Federal Trace Substance Center reaffirmed their commitment to halting the degradation of natural waters from trace chemical substances in a final statement after hosting round table dialogues between “representatives of industry

associations, water management, environmental protection associations, municipalities and the federal states.”<sup>1527</sup> The protection of natural waters from pollution specific to residues of pharmaceuticals, pesticides, biocides and other chemicals supports the health of groundwater and prevents further damage to aquatic life.

On 30 March 2022, the BMUV announced the creation of a new wilderness area in Aschhorner Moor.<sup>1528</sup> The region has suffered environmental degradation from decades of peat extraction. In creating this wilderness area, the BMUV intends to halt all further peat extraction in Aschhorner Moor and support the return and protection of moor-typical animal and plant species. Furthermore, halting peat extraction will support natural climate protection as peat will remain in bogs and prevent the carbon in them from being released into the atmosphere.

On 4 April 2022, the BMUV and the Federal Ministry for Economic Affairs outlined an agreement for faster wind turbine expansion and higher ecological protection standards.<sup>1529</sup> The agreement aims to combat both the climate crisis through the reduction of oil and gas imports and the extinction of species through the prioritization of nature conservation in the development of wind turbines.

On 13 April 2022, the BMUV pledged EUR2 million in funding to the Weidewonne project chaired by the David Nature Foundation in Thuringia and the Naturforschende Gesellschaft Altenburg.<sup>1530</sup> In accordance with the Federal Biological Diversity Program, the Weidewonne project supports landscape conservation in the German region of Thuringia through the establishment of sheep farms to graze and perform upkeep of biodiverse grasslands.

On 24 May 2022, Minister Lemke, President of the Federal Agency for Natural Conservation Sabine Riewenherm and Bavarian State Minister for Environmental and Consumer Protection Affairs Thorsten Glauber announced the extension of the “Allgäu Moorland Alliance” nature conservation project in Bavaria. The Schwindenmoos moor will be rewetted as part of the project.<sup>1531</sup>

On 25 May 2022, Minister Lemke and US Environmental Protection Administrator Michael Regan signed a joint declaration to expand cooperation on environmental policy. The partnership will focus on “natural climate protection, recycling management, marine protection, just transition, air pollution control, soil and water protection as well as the opportunities and risks that arise from digitalization for the environment.”<sup>1532</sup>

On 1 June 2022, the Bundestag approved the budget of the Ministry for the Environment and Consumer protection. The EUR2.2 billion budget focuses on nature conservation and environmental and consumer protection, including additional funds for a species aid program to “protect the species affected by the

generation of renewable energies” and for the protection of the North and Baltic Seas. Funding for the Energy and Climate Fund will fund a natural climate protection program to “rewet moors, renature floodplains and preserve and protect forests, soil and bodies of water, including marine waters.”<sup>1533</sup>

Germany has taken significant action to support the protection, conservation, and restoration of ecosystems through creating newly protected lands and marine environments nationally and internationally. Germany has also made strong efforts to precipitate increased biodiversity by implementing sustainable agriculture programs. It has also worked toward tackling the issue of climate change by funding research into climate-friendly alternatives to fossil fuels.

Thus, Germany has received a score of +1.

*Analyst: Sara Schmidt*

### **Italy: +1**

Italy has fully complied with its commitment to support and drive the protection, conservation and restoration of ecosystems critical to halt and reverse biodiversity loss and environmental degradation and to tackle climate change.

On 29 September 2021, Undersecretary to the Ministry of Ecological Transition Ilaria Fontana called for an increase to the number of marine protected areas in Antarctica, highlighting the increasingly urgent need for protection due to “cumulative anthropogenic pressures, such as pollution, illegal overfishing, acidification and the introduction of invasive alien species.”<sup>1534</sup> Speaking at the preparatory Ministerial Conference of the 40th annual meeting of the Commission for the Conservation of Antarctic Marine Living Resources, Undersecretary Fontana called for a special session dedicated to the marine protected areas, “specifically, to the proposals for the designation of new areas in East Antarctica, in the Weddell Sea and in the Antarctic Peninsula.”

On 1 October 2021, the Ministry of Agricultural, Food and Forestry Policies announced that EUR6.2 million would be allocated for the creation and implementation of projects focused on preparing a model for small-scale coastal fishing standards in protected areas.<sup>1535</sup> The initiative aims to protect and restore marine ecosystems and their biodiversity while promoting sustainable fishing.

On 11 November 2021, the Ministry of Ecological Transition launched public consultation on the Program of Measures of the Strategy for the marine environment.<sup>1536</sup>

On 20 December 2021, the Ministry of Ecological Transition announced the establishment of the Pelagos Voluntary Fund to support initiatives of the Pelagos Agreement between Italy, France and Monaco to

provide further protection of marine mammals in the Pelagos Sanctuary.<sup>1537</sup> Undersecretary Fontana emphasized the alarming rate of biodiversity loss in the Pelagos Sanctuary and reiterated Italy's commitment to the restoration of biodiversity in the sanctuary with coordinated international action.

On 7 January 2022, the Ministry of Agricultural, Food and Forestry Policies presented its National Strategic Plan to the European Commission.<sup>1538</sup> One goal of the National Strategic Plan is to strengthen the resilience of rural areas.

On 8 January 2022, Parliament approved a new law incorporating the protection of biodiversity and the ecosystem into the constitution.<sup>1539</sup> The new law states that Italy must protect the environment, biodiversity and ecosystems “in the interest of future generations,” and that future private economic initiatives cannot damage ecosystems, wildlife or people's health.

On 13 March 2022, Italy began the process of designating the Mediterranean Sea as a Sulfur Emission Control Area by submitting the MEPC 78/11 document to the International Maritime Organization.<sup>1540</sup> Protecting the sea from sulfur emissions will drastically reduce the environmental impacts of the emissions on the salubrity of the air at ports.

On 21 April 2022, the Ministry of Ecological Transition announced public consultation on the text of the National Biodiversity Strategy 2030.<sup>1541</sup> The National Strategy details Italy's plans to ensure that “by 2050 all the planet's ecosystems are restored, resilient and adequately protected” and highlights the importance of effective government action and collaboration to achieve goals related to agricultural policy, forestry and fisheries, sustainable development and the circular economy.<sup>1542</sup>

Italy has taken strong action to protect and conserve ecosystems and to halt biodiversity loss through its funding of domestic and joint international actions regarding the marine environment. This includes providing funding to restore the biodiversity in the Pelagos Sanctuary and to protect and conserve ecosystems by enforcing fishing regulations to prevent degradation.

Thus, Italy receives a score of +1.

*Analyst: Pantéa Jamshidi Nouri*

### **Japan: +1**

Japan has fully complied with its commitment to support and drive the protection, conservation and restoration of ecosystems critical to halt and reverse biodiversity loss and environmental degradation and to tackle climate change.

On 30 July 2021, the Ministry of the Environment announced the amendment of Act No. 78 of 2004 relating to combating the adverse environmental impacts of foreign alien species.<sup>1543</sup> The revision involves the inclusion of *Spilococcus maculatus*, a species recently identified as alien to Japan, to the Act.

On 12 October 2021, Minister of the Environment Tsuyoshi Yamaguchi, announced a pledge of USD17 million to support developing countries with the protection of biodiversity.<sup>1544</sup> The funding encourages “developing nations to set national strategies for biodiversity and expand their natural reserves.”

On 18 November 2021, the Ministry of the Environment announced that the Izumi Wintering Habitat of Cranes located in the Kagoshima prefecture was added to the “List of Wetlands of International Importance” under the Ramsar Convention, an international treaty for the conservation and sustainable use of wetlands.<sup>1545</sup> Over 10,000 endangered Hooded and White-naped Cranes migrate to Izumi City each winter.

On 21 December 2021, the 14th Japan-Mongolia Environmental Policy Dialogue concluded with Japan pledging to cooperate with Mongolia on the Satoyama Initiative to support biodiversity.<sup>1546</sup> Japan and Mongolia pledged to support the target to designate 30 per cent of their land as protected areas by 2030, and initiated dialogue to foster collaboration on conservation and reforestation projects.

On 26 December 2021, the Japanese Ministry of the Environment indicated its desire to collaborate with and provide technical support to the Government of Haryana in India on biodiversity conservation.<sup>1547</sup> A visit by a Japanese embassy official explored the possibility of creating a “center of excellence” related to combatting various environmental issues.

On 11 January 2022, the Central Environment Council (CEC) submitted a final report to Minister Yamaguchi and Minister of Agriculture, Forestry, and Fisheries Genjiro Kaneko regarding “[necessary] measures to be taken in the future based on the state of enforcement of the Act on the Prevention of Ecosystem Damage by Designated Invasive Alien Species.”<sup>1548</sup> The CEC submitted this report to the Minister of the Environment and the Ministry of Agriculture, Forestry and Fisheries after public input and consultation with relevant organizations.

Japan has fully complied with its commitment to halt and reverse biodiversity loss and to protect and conserve ecosystems, including domestic initiatives to protect wetlands and endangered species and international collaborative efforts with Mongolia and Haryana state in India. However, Japan has not taken action to restore ecosystems negatively impacted by biodiversity loss.

Thus, Japan receives a score of +1.

### United Kingdom: +1

The United Kingdom has fully complied with its commitment to support and drive the protection, conservation and restoration of ecosystems critical to halt and reverse biodiversity loss and environmental degradation and to tackle climate change.

On 18 June 2021, the Environment Agency and Natural England announced the reintroduction of the 1000<sup>th</sup> hazel dormouse into UK wildlife by wildlife charity People's Trust for Endangered Species, Natural England and the University of Cumbria.<sup>1549</sup> Dormouse reintroductions are part of a wider species recovery programme entitled "Back On Our Map," led by the University of Cumbria, Morecambe Bay Partnership and supported by the National Lottery Heritage Fund.

On 7 July 2021, the Environment Agency issued 14 notices for illegal angling during a multi-agency operation, Derbyshire, after 166 spot checks were carried out.<sup>1550</sup>

On 12 July, Parliamentary Under-Secretary of State for Nature Recovery and the Domestic Environment Rebecca Pow called on the general population to take five actions to care for bees and other pollinators.<sup>1551</sup> These actions marked the beginning of the Bees' Needs Week when DEFRA and other green organizations including the Royal Horticultural Society and Bumblebee Conservation Trust collaborated to encourage a healthy habitat for pollinators and "boosting biodiversity."

On 13 July 2021, the Centre for Environment, Fisheries and Aquaculture Science (CEFAS) announced that funding of GBP16.2 million from the Blue Planet Fund was released.<sup>1552</sup> Using this funding, CEFAS will provide technical assistance to support developing countries to tackle marine pollution, develop sustainable seafood practices and establish designated, well-managed and enforced marine protected areas.

On 17 July 2021, DEFRA launched consultation on extending the near-total ban on import, export and dealing of items containing elephant ivory to other ivory-bearing species.<sup>1553</sup> DEFRA outlined its proposals to ban the trade in hippo, narwhal, walrus, killer whale and sperm whale ivory in the Action Plan for Animal Welfare.

On 21 July 2021, DEFRA, the Environment Agency and Natural England announced a range of nature projects that will benefit from a new fund aimed to drive private investment in the environment and tackle climate change.<sup>1554</sup> The 27 schemes across England include initiatives restoring kelp forests, creating new woodlands and improving water quality. Organizations have been awarded up to GBP100,000 each, drawn from the GBP10 million Natural Environment Investments Readiness Fund.

On 27 July 2021, Natural England's Chair, Tony Juniper joined his Royal Highness The Prince of Wales on the Sandringham Estate to release one of the UK's most threatened species: the Eurasian curlew.<sup>1555</sup> The releases aimed to expand an existing breeding population of curlew in Breckland, creating a new curlew nature recovery network.

On 29 July, Natural England declared Johnson's Meadows, 16 acres of unspoiled grasslands in Leicestershire, rich in rare wildflowers, a Site of Special Scientific Interest (SSSI).<sup>1556</sup> The site joined 4,100 SSSIs that "form the backbone of nature conservation in England."

On 30 July 2021, Natural England launched a new scheme in Yorkshire to help conserve local populations of great crested newts and promote sustainable development.<sup>1557</sup> The scheme created a network of ponds across Yorkshire to provide habitat for the great crested newt; 37 ponds were created or restored.

On 10 August 2021, the UK government opened a consultation on plans for new Local Nature Recovery Strategies across England.<sup>1558</sup> The Local Nature Recovery Strategies aimed to "drive up the recovery of local landscapes and wildlife" and support nature-based solutions to mitigate climate change, including tree-planting or the restoration of peatland for carbon sequestration.

On 15 August 2021, DEFRA introduced a ban on the import and export of detached shark fins and products containing them.<sup>1559</sup> The ban will promote shark conservation and challenge unsustainable fishing practices.

On 16 August 2021, the Environment Agency launched a public consultation on a flood risk activity permit application from Natural England as part of a project to restore Hoveton Great Broad and Hudson's Bay in Norfolk.<sup>1560</sup> The permit is a prerequisite to the installation of permeable fish barriers that would allow water fleas to clean and restore the aforementioned water bodies without interference from fish entering the Broad.

On 25 August 2021, DEFRA and Natural England launched a consultation on the reintroduction of beavers into the wild in England.<sup>1561</sup> This consultation is a step toward further reintroductions and establishing native beaver populations.

On 22 September 2021, five UK statutory nature agencies published a report that stated that "[greater] action, investment and embracing natural solutions are crucial to halting biodiversity loss by 2030."<sup>1562</sup> In the report,

<sup>1562</sup> It's not too late to reverse biodiversity decline by 2030, UK's five leading nature bodies say, Natural England and Joint Nature Conservation Committee (London) 22 September 2021. Access Date: 20 January 2022. <https://www.gov.uk/government/news/its-not-too-late-to-reverse-biodiversity-decline-by-2030-uks-five-leading-nature-bodies-say>

the agencies outlined how the UK can meet its commitments in the Leaders' Pledge for Nature and ensure that recovery of biodiversity is prioritized on the path to net zero.

On 22 September 2021, Natural England, Amphibian and Reptile Conservation Trust, Dorset Wildlife Trust, Forestry England, National Trust, Rempstone Estate, and the RSPB agreed to a 20-year vision, a Memorandum of Understanding and the first-ever joint management plan for a 'super' National Nature Reserve.<sup>1563</sup>

On 22 September 2021, Prime Minister Boris Johnson announced that the Biodiversity Landscapes Fund will invest in six of the most environmentally critical landscapes, spanning eighteen countries, to help to combat climate change and protect rare and endangered species.<sup>1564</sup> The fund will be considered Official Development Assistance as part of the UK's commitment to international development.

On 29 September 2021, Natural England designated the Cotswold Water Park as a Site of Special Scientific Interest, offering greater protection for the park's biodiverse populations of waterbirds and aquatic plants.<sup>1565</sup>

On 1 October 2021, the UK government announced funding for conservation projects to protect species including tigers, orangutans and pangolins.<sup>1566</sup> The Illegal Wildlife Trade Challenge Fund (WTICF) will provide seventeen projects with over GBP7 million in funding. The WTICF "provides essential support to projects that tackle illegal wildlife trade for the benefit of wildlife, nature, local communities and economies, and global security."

On 5 October 2021, DEFRA published the Implementation Plan for the Healthy Bees Plan 2030 which outlines guidelines for beekeepers, bee farmers, bee associations and government to protect and augment populations of honeybees.<sup>1567</sup>

On 14 October 2021, Natural England reported that the Environment Agency approved the Hoveton Great Broad Restoration Project.<sup>1568</sup> This project will help to reverse pollution in Norfolk broad and aid in ecosystem restoration.

On 15 October 2021, the Environment Agency and Natural England published a report by the Catchment Based Approach's Chalk Stream Restoration Group.<sup>1569</sup> The report outlines recommendations of how chalk streams can be restored, enhanced and looked at ways to restore the River Rase.

<sup>1569</sup> Chalk stream strategy launched to protect 'England's rainforests', Environment Agency and Natural England (London) 15 October 2021. Access Date: 21 January 2022. <https://www.gov.uk/government/news/chalk-stream-strategy-launched-to-protect-englands-rainforests>

On 2 November 2021, the UK pledged GBP1.5 billion over five years to the Global Forest Finance Pledge.<sup>1570</sup> The funding includes GBP350 million allocated to tropical forests in Indonesia, GBP200 million to the LEAF Coalition and up to GBP300 million to the Amazon.

On 5 November 2021, the Environment Agency along with other environmental organisations released and published environment handbooks that outlined guidance for how to carry out best practice in regards to estuarine and coastal habitat creation projects across the UK and Ireland.<sup>1571</sup>

On 10 November 2021, the UK government passed legislation that intends to “clean up the country’s air, restore natural habitats, increase biodiversity, reduce waste and make better use of [its] resources.”<sup>1572</sup> The UK hopes to halt the decline in species by 2030, which will necessitate new developments to “improve or create habitats for nature, and tackle deforestation overseas.”

On 3 December 2021, the Environment Agency announced that it planted over six hundred trees in Suffolk in 2021 and plans to plant over 500 trees between December 2021 and March 2022.<sup>1573</sup>

On 16 December 2021, the Environment Agency announced the initiation of survey work as part of a pilot program tracing native and non-native crayfish in North East and Yorkshire rivers.<sup>1574</sup> The GBP20,000 National Crayfish Monitoring Programme will utilise environmental DNA surveying to identify the presence of native white-clawed crayfish, invasive signal crayfish and crayfish plague.

On 18 December 2021, DEFRA, Natural England and the Welsh Government announced plans to seek consultations on a proposed ban on the use of peat in horticulture in England and Wales, in an effort to protect precious peatland habitats and meet net-zero carbon targets.<sup>1575</sup>

On 20 January 2022, Minister for Agri-Innovation and Climate Adaptation Jo Churchill announced that new legislation will allow scientists in England to easily undertake plant-based research using genetic technologies, so that farmers can grow more resilient crops.<sup>1576</sup> Such scientific research will allow for the development of innovative ways to reduce the use of pesticides, which will protect pollinators, and to make crops more resistant to the changing climate. According to Minister Churchill, “new genetic technologies could help us tackle some of the biggest challenges of our age – around food security, climate change and biodiversity loss.”

On 21 January 2022, the Environment Agency announced that it will begin work on the Salisbury River Park project with funding from the Department for Environment, Food & Rural Affairs (DEFRA).<sup>1577</sup> The benefits of this scheme include decreased flooding risks for residents of the area, creation of wildlife corridors, improvement in biodiversity and higher recreational value of the area.

On 25 January 2022, the Forestry Commission and DEFRA announced a new drive to push farmers and landowners in England to plant more trees by providing grants of over GBP10,000 per hectare of new woodland created.<sup>1578</sup> The creation of new woodlands aims to diversify farms, boost the businesses of farmers and mitigate climate change and biodiversity loss.

On 26 January 2022, Natural England announced the allocation of over GBP11 million in funds to three nature recovery projects to tackle climate change and the biodiversity crisis.<sup>1579</sup> The recovery projects aim to “[restore] rivers, coastal and moorland habitats, [improve] river water quality, and [save] critically endangered species such as freshwater pearl mussel, as well as providing more opportunities for people to enjoy high-quality nature.”

On 27 January 2022, the Department for Environment, Food & Rural Affairs launched a forum called the UK Agriculture Partnership to bring stakeholders and experts together to identify environmental issues the agricultural sector faces and to encourage collaboration.<sup>1580</sup> The forum aims to address biodiversity decline and how sustainable agriculture can help solve biodiversity loss.

On 27 January 2022, Minister of State for the Pacific and the International Environment Zac Goldsmith announced that the UK will invest GBP2 million of aid through the World Bank’s PROBLUE fund to help protect the biodiversity of marine environments in the Eastern Pacific, especially key routes for the migration of turtles, whales, sharks and rays called the Eastern Tropical Marine Corridor.<sup>1581</sup> The UK will also send marine experts through the Ocean Country Partnership Programme to provide technical assistance.

On 8 March 2022, the Environment Agency announced that it will improve habitats for water voles, one of the UK’s fastest declining native animals, in partnership with the Waterside Stortford Group.<sup>1582</sup> The project will improve the habitat of the water voles and protect river banks from erosion, enhancing the existing habitat.

On 8 March 2022, the Forestry Commission and DEFRA announced the opening of applications for the Management Forestry Innovation Funds and the Tree Production Innovation Fund after a boost in funding by the government of the UK.<sup>1583</sup> Across both funds, GBP4.5 million will be allocated to chosen applicants for tree planting projects and sustainable management of woodlands “which together will boost nature

regeneration efforts, promote biodiversity, and support innovative approaches to tree health, resilience and production amidst a changing climate.” Chair of the Forestry, Sir William Worsley said that “both funds will drive innovation across the forestry and associated sectors to ensure our much loved trees and forests continue to thrive for generations to come in the face of a changing climate.”

On 17 March 2022, Environment Secretary George Eustice signed a Transport and Works Act Order to allow construction of the GBP100 million Bridgewater tidal barrier in Somerset.<sup>1584</sup> The infrastructure project brings environmental benefits such as the creation of wetland habitats, improvements to active fish and eel travel and greater resilience to flooding and coastal change.

On 18 March 2022, the UK Hydrographic Office and The Nippon Foundation-GEBSCO Seabed 2030 Project signed a memorandum of understanding to produce a map of the entire seafloor by 2030.<sup>1585</sup> A map of the seabed is instrumental in coastal management and understanding waves, tides, ocean circulation, movement of sediments, marine geo-hazards and climate change. Chief Executive of the UK Hydrographic Office Peter Sparkes stated that “the full mapping of the world’s oceans is a key milestone in supporting safe, secure and thriving oceans.”

On 18 March 2022, the Lower Otter Restoration Project led by the Environment Agency announced that it will replant a number of rare plants in Devon to different ecological sites.<sup>1586</sup> These rare plants were threatened by rising sea levels and degradation of embankments at the Lower Otter and needed to be transferred for their survival.

On 13 April 2022, the Marine Management Organisation announced new by-laws that prohibit damaging fish activity in four Marine Protected Areas (MPAs).<sup>1587</sup> The by-laws will come into effect 13 June 2022 and will ban “the use of bottom trawls, collectively known as bottom towed gear” to protect wildlife and marine habitats.

On 19 April 2022, the Environment Agency announced the creation of a new intertidal habitat on the River Tamar in Cornwall as part of a flood defence plan to control the risks of flood damage to infrastructure.<sup>1588</sup> The new habitat will trap sediment to help offset rising sea levels and clean river water, strengthening the area’s resilience to climate change and enriching the environment. Since the creation of the new habitat, there has already been an increase in biodiversity.

On 28 April 2022, DEFRA introduced an emergency regulation to protect Great Britain’s treescape from the spread of the Pine Processionary Moth.<sup>1589</sup> The emergency legislation halts the imports of pine and cedar trees into Great Britain from Italy and France where the Pine Processionary Moth is present “to protect treescapes and strengthen biosecurity.”

On 23 May 2022, DEFRA launched the ‘FIT Count’ app alongside the UK Centre for Ecology & Hydrology to encourage Britons to “spend 10 minutes a day collecting data on the number of insects that visit particular

patches of flowers.” The free app will help DEFRA track pollinator numbers and movements as part of a wider initiative to halt the decline in pollinator populations.<sup>1590</sup>

On 23 May 2022, DEFRA announced the allocation of GBP6.4 million in funding to 20 environmental recovery projects in UK Overseas Territories. The funding will support projects related to research on and delivery of projects related to marine conservation and ecosystem resilience.<sup>1591</sup>

On 26 May 2022, DEFRA and Natural England announced five multi-partnership nature recovery projects to create and restore “wildlife-rich habitats, corridors and stepping-stones” for wildlife populations in the West Midlands, Cambridgeshire, the Peak District, Norfolk and Somerset. These projects will “improve the landscape’s resilience to climate change, providing natural solutions to reduce carbon and manage flood risk.”<sup>1592</sup>

On 31 May 2022, DEFRA and the Environment Agency announced the second round of the Natural Environment Investment Readiness Fund (NEIRF) will allocate grants of up to GBP100,000 to 50 projects led by environmental groups, local authorities, businesses and other organizations “to help them develop nature projects to a point where they can attract private investment.” Projects include those creating green spaces in British cities, developing flood resilience and restoring peatlands.<sup>1593</sup>

On 7 June 2022, the Foreign, Commonwealth & Development Office announced that the UK and Malaysia signed the “UK-Malaysia memorandum of understanding 2022” to strengthen cooperation on climate, biodiversity and the reduction of greenhouse gas emissions. The partnership will include knowledge sharing, the promotion of scientific and technical collaboration, support for private sector involvement and outreach activities.<sup>1594</sup>

On 8 June 2022, the Environment Agency announced a new tool to increase the native oyster population around the English coast. England’s native oyster populations have fallen to approximately five per cent of pre-industrial levels. Academics at the Universities of Exeter and Edinburgh developed a new mapping tool on the ArcGIS (geographical information service) site to “support local authorities, community partnerships and environmental organisations to make the case for native oyster restoration projects.”<sup>1595</sup>

The United Kingdom has fully complied with its commitment to support and drive the protection, conservation and restoration of ecosystems critical to halt and reverse biodiversity loss and environmental degradation and to tackle climate change. The United Kingdom has taken consistent strong action to promote biodiversity domestically and internationally, including through the reintroduction of threatened species back into the wild, passing of legislation to protect endangered species, initiatives to thwart negative externalities brought by climate change and degradation of ecosystems and initiatives to restore wildlife habitats and reforestation efforts.

Thus, the United Kingdom receives a score of +1.

*Analysts: Tanmaya Ramprasad and Pantéa Jamsbidi Nouri*

### **United States: +1**

The United States has fully complied with its commitment to support and drive the protection, conservation and restoration of ecosystems critical to halt and reverse biodiversity loss and environmental degradation and to tackle climate change.

On 21 June 2021, Secretary of Agriculture Tom Vilsack issued a United States Department of Agriculture (USDA) proclamation to recognize the designation of the week of June 21–27, 2021 as National Pollinator Week.<sup>1596</sup> The proclamation aids in the protection and conservation of birds, bats, bees and other insects that play an important role in producing more than 100 crops grown in the United States.

On 15 July 2021, the USDA announced the Southeast Alaska Sustainability Strategy.<sup>1597</sup> As part of the new strategy, the USDA ended large-scale old-growth timber sales on the Tongass National Forest and shifted focus to “support forest restoration, recreation and resilience, including for climate, wildlife habitat and watershed improvement.”

On 9 September 2021, the USDA announced an investment of USD464 million to build or improve renewable energy infrastructure.<sup>1598</sup> The funding will allow agricultural producers and rural small businesses to purchase and install renewable energy systems, reducing their contribution to biodiversity decline and the climate emergency.

On 30 September 2021, the Environmental Protection Agency (EPA) announced that they will provide USD1,855,200 to the West Virginia Department of Environmental Protection.<sup>1599</sup> This funding will be used to restore water quality that was degraded from surface runoff.

On 30 September 2021, the EPA announced that they will provide USD1.2 million to the Delaware Department of Natural Resources and Environmental Control.<sup>1600</sup> This funding will help to restore water quality.

On 4 October 2021, the EPA announced that they will provide USD1.78 to the Virginia Department of Environmental Quality.<sup>1601</sup> The funding will help to restore water quality in rivers.

On 4 October 2021, the EPA announced that they will provide almost USD5 million to the Pennsylvania Department of Environmental Protection.<sup>1602</sup> The funding will help to improve and restore the water quality in rivers and streams.

On 5 October 2021, the EPA announced that they will provide USD2.3 million to the Maryland Department of Environment.<sup>1603</sup> The funding will help to restore water quality.

On 5 October 2021, the EPA announced that they will provide USD1 million to the District of Columbia Department of Energy and Environment.<sup>1604</sup> The funding will be used to help restore water quality in rivers.

On 7 October 2021, the EPA announced that they will provide USD500 thousand to the Pennsylvania Department of Conservation and Natural Resources.<sup>1605</sup> The funding will be used to enhance the states wetlands, state parks and forests.<sup>1606</sup>

On 7 October 2021, the USDA released its climate adaptation and resilience plan outlining how the department will prepare for current and future impacts of climate change.<sup>1607</sup> The new plan will “[integrate] climate change into USDA’s planning and decision making”, invest in soil and forest health to build resilience, provide accessible climate data at regional and local levels, support climate-related research and development, and broaden outreach and education to promote adaptation strategies.

On 7 October 2021, the EPA announced that they are providing USD667,621 to the Virginia Department of Environmental Quality.<sup>1608</sup> This funding will be used to support wetlands protection, as well as to preserve water quality and natural resources. Some funding will also be used to assess the health and state of the wetlands in order to determine which areas need to be restored.

On 7 October 2021, the EPA announced that they are providing USD299,362 to the West Virginia Department of Environmental Protection.<sup>1609</sup> This funding will be used to support wetlands protection, as well as to preserve water quality and natural resources. Some funding will also be used to assess the health and state of the wetlands in order to determine which areas need to be restored.

On 7 October 2021, the EPA announced that they are providing USD599,273 to the Delaware Department of Natural Resources and Environmental Control.<sup>1610</sup> The funding will be used to support wetlands protection, as well as to preserve water quality and natural resources.

On 12 October 2021, the EPA announced that they are providing USD144,202 in federal funding to the Maryland Department of Environment.<sup>1611</sup> The funding will be used to enhance Delaware's wetlands and "protect, restore or enhance" coastal habitats.

On 20 October 2021, the USDA and the Department of the Interior announces actions to protect the Boundary Waters Canoe Area Wilderness and surrounding watershed in Northeastern Minnesota as the area is vital to the National Wilderness Preservation System.<sup>1612</sup> Some of the actions included a twenty-year withdrawal of key portions of the national forest lands from under mineral and geothermal leasing laws, prohibiting any prospective permits or leases in the area.

On 2 November 2021, the US and the United Arab Emirates officially launched the Agriculture Innovation Mission for Climate (AIM for Climate) alongside thirty-one countries and over forty-eight non-government partners.<sup>1613</sup> AIM for Climate is intended to raise global climate ambition and increase investment and public-private involvement in climate-smart agriculture and food systems.

On 19 November 2021, the USDA announced that it is taking steps to repeal the 2020 Alaska Roadless Rule and "restore protections to more than nine million acres of inventoried roadless areas on the Tongass National Forest."<sup>1614</sup>

On 17 December 2021, the USDA, Department of the Interior and Department of Homeland Security's Federal Emergency Management Agency announced the establishment of a Wildland Fire Mitigation and Management Commission.<sup>1615</sup> The Commission will recommend "federal policies and strategies to effectively prevent, mitigate, suppress and manage wildland fires, including the rehabilitation of land affected from wildland fires."

On 10 January 2022, the USDA invested USD50 million in 118 partnerships to expand access to conservation assistance for climate-smart agriculture and forestry.<sup>1616</sup> The funding is aimed to support projects that prioritize "[improving] soil health and water quality, [providing] habitat for at-risk wildlife, [improving] natural resources and productivity on agricultural lands and/or [building] and strengthening local and regional food systems and markets.

<sup>1616</sup> USDA Invests \$50 million in Partnerships to Improve Equity in Conservation Programs, Address Climate Change, U.S. Department of Agriculture (Washington D.C.) 10 January 2022. Access Date: 22 January 2022. <https://www.usda.gov/media/press-releases/2022/01/10/usda-invests-50-million-partnerships-improve-equity-conservation>

On 12 January 2022, the USDA announced “a USD9 million investment in new Cooperative Extension and USDA Climate Hubs partnerships to bolster climate research, connect and share climate-smart solutions directly with the agricultural community.”<sup>1617</sup>

On 13 January 2022, the USDA announced USD225 million in funding for the Regional Conservation Program.<sup>1618</sup> Initiatives by the Regional Conservation Program leverage collective resources to find solutions to address natural resource challenges on agricultural land.

On 7 February 2022, Secretary of Agriculture Tom Vilsack announced that the US Department of Agriculture (USDA) would invest USD1 billion in a new funding opportunity named the Partnerships for Climate-Smart Commodities.<sup>1619</sup> The USDA’s funding intends to finance and pilot climate-smart farming practices and, thus, reduce greenhouse gas emissions. By allocating funding that drives clean farming energy and infrastructure, this action supports halting the climate crisis and mitigating its negative environmental impact on ecosystems.<sup>1620</sup>

On 11 February 2022, the US Fish and Wildlife Service committed USD1.5 billion in annual funding to the Wildlife and Sports Restoration Program (WSFR).<sup>1621</sup> The WSFR supports environmental conservation projects that include fish and wildlife management, habitat protection and restoration, scientific research, and further efforts at the local and individual levels. This funding to the WSFR demonstrates the United States’ compliance with supporting the conservation of wildlife and habitat from degradation.

On 28 February 2022, the National Oceanic and Atmospheric administrator Dr. Rick Spinrad, in response to the Intergovernmental Panel on Climate Change 2022 Impacts Report, verbally reaffirmed the United States’ commitment to form climate action and adaptation plans.<sup>1622</sup> Specifically, Dr. Rick Spinrad noted the importance of supporting ecosystems in adapting to the effects of climate change.

On 8 March 2022, the Department of the Interior announced that the US Fish and Wildlife Service is soliciting project proposals that intend to reverse the degradation of the Klamath Basin in Southern Oregon and Northern California.<sup>1623</sup> This announcement comes after President Biden made USD162 million in funding available in his Bipartisan Infrastructure Law. The Department noted its intent to support the restoration of the Basin’s water and ecosystem resilience which is habitat to many native aquatic species.

On 11 March 2022, the U.S. Environmental Protection Agency announced a new federal proposal to help states fulfill their commitment to the Clean Air Act, signed in 2015.<sup>1624</sup> The proposal involves a control strategy that introduces emission limits for power plants and industrial sources. By reducing ground-level ozone emissions, this action will improve the protection of vulnerable ecosystems to air quality.

On 18 March 2022, the US Climate Variability and Predictability Program held its 2022 Summit in Washington D.C. and hosted discussions among climate scientists on risk management strategies for Earth's climate system.<sup>1625</sup> This meeting allowed scientists to advance the conversation surrounding climate science research and reaffirm the US. commitment to halting and tackling climate change.

On 6 April 2022, Deputy Secretary of the Interior Tommy Beaudreau and US Fish and Wildlife Service Director Martha Williams affirmed their commitment to support Puerto Rico's climate and ecosystem resilience while visiting the island to discuss investment through the Biden-Harris Administration's Bipartisan Infrastructure Law and the Great American Outdoors Act.<sup>1626</sup> Deputy Secretary Beaudreau and Director Williams met with San Juan community leaders to discuss environmental justice, discussing efforts "to ensure that historically underrepresented communities benefit from the Department's work to clean up legacy pollution, boost the clean energy economy and make America's public lands and waters accessible and welcoming to everyone."

On 7 April 2022, Secretary of the Interior Deb Haaland allocated USD2.5 million in grants to projects aimed at enhancing and supporting habitat connectivity.<sup>1627</sup> Alongside this announcement, Secretary Haaland outlined the Interior Department's vision for advancing wildlife corridors through collaboration with Indigenous partners and funding scientific research related to the identification, analysis and mapping of migratory habitats.

On 12 April 2022, the Department of the Interior pledged USD38 million in funding to the National Fish Passage Program for 40 fish passage projects in 23 states and Puerto Rico.<sup>1628</sup> The announcement was preceded by the Biden-Harris Administration Bipartisan Infrastructure Law's pledge of USD200 million in funding to the National Passage Program over the course of the next five years. The funding will support aquatic restoration projects involved in removing outdated barriers, such as dams, that obstruct aquatic connectivity among the nation's rivers, streams and coastal systems. Ultimately, this support will drive the diversity of aquatic species and the restoration of free-flowing waters for fish migration.

On 12 April 2022, the Environmental Protection Agency (EPA) released "its first-ever comprehensive workplan to address the decades-old challenge of protecting endangered species from pesticides."<sup>1629</sup> The EPA detailed its plan to meet all obligations under the Endangered Species Act (ESA), improve approaches

to identify and require protections under the ESA, improve “efficiency and timeliness of the ESA consultation process for pesticides” and to improve engagement with stakeholders.

On 18 April 2022, the EPA announced USD542 million in funding to “reduce pollution and plastic waste in our shared oceans” as part of the Biden-Harris Administration’s celebration of Earth Week.<sup>1630</sup> Funding will include USD350 million allocated to recycling initiatives, USD132 million to the development of infrastructure to reduce pollution in freshwater ecosystems and the ocean and USD60 million to support states as “they reduce nutrients in our waterways to shrink the size of the dead zone in the Gulf of Mexico.”

On 19 April 2022, the Department of the Treasury and the Department of State jointly pledged USD600.8 million to the eighth replenishment of the Global Environment Facility (GEF-8) over the next four years.<sup>1631</sup> The GEF-8 is a multilateral environmental fund committed to financing projects and programs to improve the global environment and biodiversity. This pledge of funds to the GEF-8 is in accordance with the Biden-Harris Administration’s commitment to halting climate change and restoring and conserving ecosystems.

On 20 April 2022, the Our Ocean Conference, co-hosted by the Republic of Palau and the United States, concluded with 410 commitments worth USD16.35 billion aimed at solving ocean-climate-related issues and promoting ocean health.<sup>1632</sup> The conference was attended by 70 foreign delegations and 150 non-state actors and featured six issue-related areas of commitment: climate, sustainable fisheries, sustainable blue economies, marine protected areas, maritime security and marine pollution. The United States promoted its commitment to protecting marine biological diversity by co-hosting an international forum devoted to implementing concrete policy on worldwide ocean health.

The United States has fully complied with its commitment to support and drive the protection, conservation and restoration of ecosystems critical to halt and reverse biodiversity loss and environmental degradation and tackle climate change. The United States has allocated an extensive budget toward funding projects and programs that seek to improve ecological connectivity, mitigate the effects of climate change and support environmental resilience. Furthermore, the United States has taken strong actions at the international level by collaborating with other countries and international entities to address biodiversity loss and climate change.

Thus, the United States has received a score of +1.

*Analyst: Sara Schmidt and Tanmaya Ramprasad*

### **European Union: +1**

The European Union has fully complied with its commitment to support and drive the protection, conservation and restoration of ecosystems critical to halt and reverse biodiversity loss and environmental degradation and to tackle climate change.

On 17 June 2021, the European Commission endorsed Denmark’s EUR1.5 billion recovery and resilience plan, “paving the way for the EU to disburse EUR1.5 billion in grants under the Recovery and Resilience

Facility over the period 2021-2026.”<sup>1633</sup> Strengthening environmental protection and protecting biodiversity are highlighted as priorities in Denmark’s green and digital recovery.

On 17 June 2021, the European Commission endorsed Greece’s EUR30.5 billion recovery and resilience plan to support Greece’s green and digital transition.<sup>1634</sup> The plan includes investments towards fire prevention and a national reforestation programme to enhance biodiversity protection.

On 18 June 2021, the European Commission endorsed Luxembourg’s EUR93 million recovery and resilience plan to support Luxembourg’s green and digital transition.<sup>1635</sup> Under the plan, 61 per cent of expenditures will support climate goals, including a plan to encourage municipalities to protect biodiversity and the environment.

On 21 June 2021, the European Commission endorsed Austria’s EUR3.5 billion recovery and resilience plan to support Austria’s green and digital transition.<sup>1636</sup> Under the plan, 59 per cent of the expenditures will support climate goals, including investments towards biodiversity.

On 22 June 2021, the European Commission endorsed Italy’s EUR191.5 billion recovery and resilience plan to support Italy’s green and digital transition.<sup>1637</sup> As a part of the plan, 37 per cent of expenditures will support climate-related objectives, including biodiversity protection.

On 23 June 2021, the European Commission endorsed Belgium’s EUR5.9 billion recovery and resilience plan to support its green and digital transition.<sup>1638</sup> The plan will invest directly in the preservation of biodiversity in protected areas, enhancement of resilient forest management, creation of wetlands, ecological restoration operations and development of green infrastructure.

On 23 June 2021, the European Commission endorsed France’s EUR39.4 billion recovery and resilience plan to support its green and digital transitions.<sup>1639</sup> Under the plan, 46 per cent of expenditures will support climate goals, including investments in protected areas, ecological restoration, forest management and expansion of wooded areas to preserve biodiversity.

On 14 July 2021, the European Commission adopted proposals to decrease greenhouse gas emissions by at least 55 per cent by 2030. The EU Forest Strategy plans to plant 3 billion trees across Europe by 2030 and support foresters and the forest-based bioeconomy to “improve the quality, quantity and resilience of EU forests.”<sup>1640</sup>

On 22 September 2021, President of the European Commission Ursula von der Leyen announced the EU will double its external funding for biodiversity in the EU’s new seven-year budget, prioritizing the most

vulnerable countries.<sup>1641</sup> The funding aims to support a more effective new Global Biodiversity Framework and to strengthen cooperation on biodiversity protection.

On 8 October 2021, the European Commission launched a public consultation to evaluate and revise the EU Action Plan against Wildlife Trafficking.<sup>1642</sup> The public consultation will collect information from citizens and stakeholder organizations about the effectiveness and added value of the Action Plan in minimizing wildlife trafficking.

On 12 October 2021, the European Commission issued a guidance document under the Habitats Directive for the protection of animals, including wolves, bears and dolphins.<sup>1643</sup> The new document includes recent Court of Justice rulings, which will help to ensure more effective implementation of biodiversity protection rules in the EU. The new guidance document serves to assist Member States in the implementation of the Habitats Directive.

On 29 October 2021, Commissioner for Environment, Oceans and Fisheries Virginijus Sinkevičius called for world leaders “to address climate change and biodiversity loss in an integrated manner” ahead of the COP26 climate conference.<sup>1644</sup>

On 17 November 2021, the European Commission adopted three new initiatives for the implementation of the European Green Deal.<sup>1645</sup> The new initiatives include “new rules to curb EU-driven deforestation, as well as new rules to facilitate intra-EU waste shipments to promote circular economy and tackle the export of illegal waste and waste challenges to third countries...[and] a new Soil strategy to have all European soils restored, resilient, and adequately protected by 2050.” The new initiatives aim to lower the global impact on biodiversity loss.

On 25 November 2021, the European Commission approved over EUR290 million of investment in 132 projects under the LIFE programme for the environment and climate action<sup>1646</sup> The new LIFE projects will contribute to the EU’s green recovery after Covid-19 and aid in efforts to recover Europe’s biodiversity by 2030 and make Europe climate-neutral by 2050.

On 9 December 2021, the European Commission and the European Environment Agency announced a project to publish a data tool called ‘MapMyTree’ for organizations to contribute to the pledge of planting three billion trees by 2030 and to register and keep track of their contribution to the EU’s target.<sup>1647</sup> The

<sup>1647</sup> Biodiversity: Three billion additional trees by 2030 – launch of MapMyTree tool, Directorate-General for Environment (Brussels) 9 December 2021. Access Date: 27 December 2021. [https://ec.europa.eu/environment/news/mapmytree-new-data-tool-count-planted-trees-europe-2021-12-09\\_en](https://ec.europa.eu/environment/news/mapmytree-new-data-tool-count-planted-trees-europe-2021-12-09_en)

MapMyTree data tool forms part of the EU's Biodiversity Strategy for 2030 and aims to "increase the EU forest area and resilience, enhance biodiversity and help with climate change mitigation and adaptation."

On 15 December 2021, the Commission launched two online tracking tools to measure progress made in implementing the EU Biodiversity Strategy for 2030.<sup>1648</sup> Both tracking tools aim to strengthen EU governance in the biodiversity sector by "improving the knowledge and evidence base for biodiversity policy, increasing accountability for implementation, ensuring transparent and effective progress monitoring and review."

On 16 December 2021, the European Commission banned most forms of trade in ivory as part of its Biodiversity Strategy for 2030 to fight environmental crime and protect biodiversity.<sup>1649</sup> The only form of trade in ivory allowed in the EU market will be for the reparation of objects already containing ancient ivory.

On 21 December 2021, the European Commission's College of Commissioners endorsed new guidelines on aid for States with respect to climate, environmental protection and energy.<sup>1650</sup> The guidelines support the "protection and restoration of biodiversity" and cover aid for "biodiversity and for the remediation of environmental damage."

On 27 January 2022, the European Commission introduced new Climate, Energy and Environmental Aid Guidelines (CEEAG) which "provide the framework for public authorities to support the European Green Deal objectives efficiently and with minimum distortions of competition."<sup>1651</sup> The new guidelines broaden the types of investments and technologies that Member States can support and cover new areas including biodiversity. The CEEAG provides a common framework to facilitate each member states' protection and restoration of biodiversity, the recovery of ecosystems and the application of nature-based solutions.

On 9 February 2022, the European Commission referred the country of Malta to the Court of Justice of the EU after failing to comply with the Urban Waste Water Treatment Directive (Directive 91/271/EEC).<sup>1652</sup> Waste waters leaving treatment plants in Malta had not met the quality requirements of the directive. Such waste water can damage freshwater and marine ecosystems through eutrophication, a process in which bacteria and viruses of contaminated water cause excessive growth of algae that depletes the water of oxygen, killing other organisms in the ecosystem.

On 9 February 2022, the European Commission referred the country of Poland to the Court of Justice of the EU after failing to comply with the Urban Waste Water Treatment Directive (Directive 91/271/EEC).<sup>1653</sup> Since 2015, Poland had been discharging untreated wastewater directly into rivers, seas or lakes, which can damage freshwater and marine ecosystems through eutrophication, a process in which bacteria and viruses of contaminated water cause excessive growth of algae that depletes the water of oxygen, killing other organisms in the ecosystem.

On 11 February 2022, the European Commission presented three marine conservation initiatives at the One Ocean Summit hosted by France in Brest.<sup>1654</sup> The three initiatives include an international coalition to protect biodiversity on high seas, a computing project that would allow for the digital simulation of the oceans for researchers and the EU’s research mission to restore the oceans by 2030. The “high-ambition” coalition on Biodiversity Beyond National Jurisdiction aims to protect marine biodiversity and resources.

On 16 February 2022, Members of the European Parliament adopted a report of recommendations on deploying offshore wind more quickly and on the importance of sustainable management of maritime space and coasts.<sup>1655</sup> Sustainable offshore wind farms benefit marine biodiversity and ecosystems and can coexist with economic activities such as fishing and maritime transport.

On 17 February 2022, the European Commission announced that it will invest over EUR110 million in LIFE projects for environmental and climate protection for 11 EU countries: Cyprus, Czechia, Denmark, Estonia, Finland, France, Latvia, Lithuania, the Netherlands, Poland and Slovenia.<sup>1656</sup> A project based in Finland aims to combat marine and coastal biodiversity loss and a project in France aims to halt and reverse biodiversity loss in the Grand Est region.

On 18 February 2022, the European Commission introduced Africa’s Great Green Wall Initiative as a part of the Global Gateway Investment Package at the 6th EU-Africa summit.<sup>1657</sup> This initiative aims to protect biodiversity and ecosystems in 18 African countries through EU funding.

On 23 February 2022, the European Commission adopted a proposal for a directive with rules for companies with respect to human rights and the environment in an effort to increase corporate sustainability.<sup>1658</sup> Companies will be required to identify and mitigate their impact on the environment, including biodiversity loss.

On 23 March 2022, the European Commission adopted the first Interreg cooperation programmes for the 2021-2027 period, investing EUR481 million into three European Territorial Cooperation programmes: Interreg Central Europe, Interreg Austria-Germany (Bavaria) and Interreg Germany (Bavaria)-Czechia.<sup>1659</sup> The Interreg Germany (Bavaria)-Czechia programme will receive EUR123.8 million in funding for the protection and preservation of nature, biodiversity and green infrastructure.

On 14 April 2022, the European Commission announced EUR1 billion in funding to protect the ocean at the Our Ocean Conference in Palau.<sup>1660</sup> EU funding will be allocated to “marine protected areas; tackling marine pollution; confronting the ocean-climate crisis; creating sustainable blue economies; advancing sustainable small-scale fisheries and aquaculture; and achieving a safe, just and secure ocean.” The EU has created a “commitment tracking tool” to empower citizens to hold leaders accountable to commitments made at the conference.

<sup>1660</sup> Green Deal: EU announces €1 billion worth of commitments to protect the ocean. European Commission (Brussels) 14 April 2022. Access Date: 7 May 2022. [https://ec.europa.eu/commission/presscorner/detail/en/ip\\_22\\_2398](https://ec.europa.eu/commission/presscorner/detail/en/ip_22_2398)

On 8 June 2022, EU High Representative Josep Borrell and Commissioner for Environment, Oceans and Fisheries, Virginijus Sinkevičius, released a joint statement on World Oceans Day calling for the EU to take action that protects marine ecosystems. The statement recognizes the EU's proposal to designate two new areas in the Southern Antarctic Ocean as protected areas and calls for further work to be done to curb plastic pollution.<sup>1661</sup>

The European Union has fully complied with its commitment to halt and reverse biodiversity loss. The European Union has taken strong steps in protecting and conserving ecosystems, restoring ecosystems and halting and reversing biodiversity loss by creating guidelines to assist the Member States in creating the EU Forest Strategy and Soil Strategy, funding the recovery and resilience plan of most Member States and banning most forms of ivory trade within the EU.

Thus, the European Union receives a score of +1.
