g7@utoronto.ca
@g7_rg

"We have meanwhile set up a process and there are also independent institutions monitoring which objectives of our G7 meetings we actually achieve. When it comes to these goals we have a compliance rate of about 80%, according to the University of Toronto. Germany, with its 87%, comes off pretty well. That means that next year too, under the Japanese G7 presidency, we are going to check where we stand in comparison to what we have discussed with each other now. So a lot of what we have resolved to do here together is something that we are going to have to work very hard at over the next few months. But I think that it has become apparent that we, as the G7, want to assume responsibility far beyond the prosperity in our own countries. That's why today's outreach meetings, that is the meetings with our guests, were also of great importance."

Chancellor Angela Merkel, Schloss Elmau, 8 June 2015

G7 summits are a moment for people to judge whether aspirational intent is met by concrete commitments. The G7 Research Group provides a report card on the implementation of G7 and G20 commitments. It is a good moment for the public to interact with leaders and say, you took a leadership position on these issues — a year later, or three years later, what have you accomplished?

Achim Steiner, Administrator, United Nations Development Programme, in <u>G7 Canada: The 2018</u> <u>Charlevoix Summit</u>

Background

Application of internationally recognized environmental standards throughout the global economy has been addressed at the past three G7 summits. In 2015 and 2016, G7 members committed to, "[strive for better application of internationally recognized] environmental standards [in global supply chains]." ⁷³⁰ The 2017 commitment progresses from this and "[commits to strive for better application and promotion]." ⁷³¹

This commitment has been developed in the context of G7 member support for sustainable development and free trade, and focuses on improving supply chains to achieve broader ambitions. In 2015, G7 members recognized that they had an "important role to play in promoting ... environmental protection in global supply chains" ⁷³² given their "prominent share in the globalization process." Moreover, G7 members reiterated the importance of responsible supply chains in "fostering sustainable economic development." This commitment was shaped by an increased international awareness to improve global supply chains after the Rana Plaza disaster where, in 2013, a Bangladesh garment factory collapsed killing 1,137 people.

Though the World Trade Organization (WTO) is a key institutional body supported by the G7 to facilitate trade, it does not play a role in setting internationally recognized environmental standards. Instead, it stipulates a code of good practice through the Technical Barriers to Trade Agreement for international standardizing bodies to follow in setting international standards. Bodies that comply with this code to set international environmental standards include the International Standardization

⁷³⁵ G7 leaders agree on new insurance fund after Rana Plaza disaster, The Guardian (London) 8 June 2015. Access Date: 16 October 2017. https://www.theguardian.com/world/2015/jun/08/g7-insurance-fund-rana-plaza-disaster.

Organization and the International Electrotechnical Commission.⁷³⁶ Given G7 support for the WTO, this commitment supports promotion and application of environmental standards from standardization bodies that follow this code.⁷³⁷ Furthermore, the G7 mentioned particular support for application of environmental standards, principles, and commitments as laid out by the United Nations, the Organization for Economic Co-operation and Development (OECD), the International Labour Organization (ILO) and applicable environmental agreements, at its 2015 summit.⁷³⁸ Thus, this commitment additionally applies to the application and promotion of environmental standards relevant to those institutions and agreements.

The 2016 Ise Shima progress report pointed to a number of indicators to follow commitments in this area. ⁷³⁹ These indicators include: support offered to multi-stakeholder initiatives (MSI) in G7 countries and partner countries, participants, and wider geographical reach of MSIs; funding or other support to partner countries in taking advantage of responsible global supply chains; funding or other support to small and medium-sized enterprises (SMEs) to understand due diligence and responsible global supply chains; funding or other support to SMEs to understand due diligence and responsible supply chain management; number of offers to host and/or attend voluntary G7 National Contact Points (NCP) and number of G7 NCP peer learning activities. Actions to make progress on the 2015 commitment were seen in these indicators, with a bigger focus on labour safety than specifically environmental standards.

A number of barriers currently prevent application of relevant international environmental standards. These include a lack of national capacity to comply with standards, ⁷⁴⁰ lack of national recognition of standards, poor inclusion of developing countries in international standard consensus, and lastly, the voluntary nature of standards. ⁷⁴¹ Thus, these barriers must be addressed by G7 members as part of this commitment in order to better apply and promote internationally recognized environmental standards.

Commitment Features

There are two different aspects to this commitment. The first is the pledge to apply "internationally recognized environmental standards [throughout the global economy and its supply chains.]" The second is the promotion of internationally recognized environmental standards.

The commitment only applies to environmental standards that are internationally recognized, thus only to, "Document[s] approved by a recognized body, that provide[s], for common and repeated use, rules, guidelines or characteristics for products or related processes and production methods, with which compliance is not mandatory"⁷⁴² that are developed through international community

consensus. Environmental standards published by the UN, OECD, ILO and relevant environmental agreements also are applicable, as per the 2015 summit.⁷⁴³

As the first aspect is shaped in the context of global supply chains, compliance with application does not require G7 members to bring these environmental standards into their own national legislation. The application of recognized environmental standards is distinguished from their promotion, in that promotion involves political support for internationally recognized environmental standards, whereas application looks to actions that allow for implementation and adherence to internationally recognized environmental standards. Promotion involves support or renewal of old efforts or the creation of new efforts in the area. It should not have to be a brand new initiative.⁷⁴⁴

Application can materialize in a number of different ways. To be considered as applying internationally recognized environmental standards in the global economy and its supply chains, countries must partake in one or more of the following ways:

- 1. Introduction of internationally recognized environmental standards into national legislation.
- 2. Introduction of internationally recognized environmental standards in national standards.
- 3. Provision of technical assistance in implementation of internationally recognized environmental standards.
- 4. Capacity building to support implementation of internationally recognized environmental standards.
- 5. Guidance or support in supply chain due diligence.

While promotion of internationally recognized environmental standards does not necessarily involve application, application can be considered promotion as application demonstrates political support for internationally recognized environmental standards. Statements in support and recognition of internationally recognized environmental standards are considered promotion but not application. Both promotion and application of environmental standards can be on a global or national scale for compliance, provided that they are in line with internationally recognized environmental standards.

Scoring Guidelines

No action to promote or apply internationally recognized environmental standards are undertaken OR existing initiatives are scaled back throughout the global economy and its supply chains.

Continuation of existing initiatives to better apply and promote internationally environmental standards by member country is seen OR new initiatives in the promotion of internationally recognized environmental standards are seen throughout the global economy and its supply chains.

New initiatives to better apply AND promote internationally recognized environmental standards are undertaken by the member country throughout the global economy and its supply chains.

Canada: +1

Canada has fully complied with its commitment to strive "for better application and promotion of internationally recognized environmental standards throughout the global economy and its supply chains."

On 27 May 2017, Environment and Climate Change Canada published two proposed regulations: Regulations Respecting Reduction in the Release of Volatile Organic Compounds (Petroleum Sector)⁷⁴⁵ and the Regulations Respecting Reduction in the Release of Methane and Certain Volatile Organic Compounds (Upstream Oil and Gas Sector).⁷⁴⁶ The regulations are intended to "reduce methane emissions and air pollution from the oil and gas sector."⁷⁴⁷ The regulations establish facility standards for leak detection and repair programs in the petroleum sector.⁷⁴⁸ They also encourage the use of non-emitting controllers while prohibiting venting at facilities during fracturing operations in the oil and gas sector.⁷⁴⁹ The Montreal Protocol on Substances that Deplete the Ozone Layer, which is an international treaty ratified by all members of the United Nations, mandates the reduction of methane emissions.⁷⁵⁰

On 5 June 2017, Canada committed USD 2.65 billion by 2020 "to help developing countries transition to low-carbon, climate-resilient economies."⁷⁵¹ Under the Paris Agreement of the UN Framework Convention on Climate Change, the parties agreed that "developed country Parties shall provide financial resources to assist developing country Parties concerning both mitigation and adaptation in continuation of their existing obligations under the Convention."⁷⁵²

On 15 June 2017, Canada announced its Low Carbon Economy Fund.⁷⁵³ The fund will invest in projects that "will generate clean growth and reduce greenhouse gas emissions and help meet or exceed [Canada's] Paris Agreement commitments."⁷⁵⁴ This announcement is in line with the Paris

Agreement commitment to "prepare, communicate and maintain successive nationally determined contributions that it intends to achieve." ⁷⁵⁵

On 14 August 2017, Foreign Minister Chrystia Freeland proposed the addition of stronger environmental standards to North American Free Trade Agreement (NAFTA).⁷⁵⁶ Freeland stated that Canada is committed to "integrating enhanced environmental provisions to ensure no NAFTA country weakens environmental protection to attract investment" in addition to a general commitment to labour and environmental standards.⁷⁵⁷

On 21 September 2017, Canada and the European Union provisionally applied the Canada–European Union Comprehensive Economic and Trade Agreement (CETA).⁷⁵⁸ CETA states that the Parties "reaffirm their commitment to promoting the development of international trade in such a way as to contribute to the objective of sustainable development."⁷⁵⁹ Mentioned environmentally-friendly practices include eco-labelling, fair trade schemes, encouraging adherence to the Organisation for Economic Cooperation and Developments's (OECD) best practices on environmental objectives, and the creation of a Committee on Trade and Sustainable Development. The trade agreement recognizes the international environmental standards of the OECD, the Rio Declaration on Environment and Development of 1992, and the Johannesburg Declaration on Sustainable Development of 2002. The agreement is subject to further ratification and approval from the national and regional parliaments, though substantial portions have been provisionally applied.

On 5 October 2017, Canada passed the Regulations Amending the Ozone-depleting Substances and Halocarbon Alternatives Regulations.⁷⁶³ Manufacturers of products with hydrofluorocarbons (HFCs) will be regulated and required to transition to alternative substances with lower global warming potentials.⁷⁶⁴ Sectors that will be affected include manufacturers of centralized refrigeration systems,

domestic air conditioners, and aerosols.⁷⁶⁵ This directly incorporates the standards of the Kigali Amendment to the Montreal Protocol, which includes a global agreement to reduce HFCs.⁷⁶⁶

On 10 November 2017, Canada proposed revisions to the Federal Halocarbon Regulations.⁷⁶⁷ The goal of the revisions is to "[minimize] releases of halocarbons to the environment." 768 One proposed revision states that "Before permanently withdrawing from use any air-conditioning system, refrigeration system, solvent system, fire-extinguishing cylinder, or container, it is proposed that a person shall recover all halocarbons contained in the system or cylinder into a container designed to contain that specific type of halocarbon."769 Halocarbons have high ozone-depleting potential, and they are listed in the Montreal Protocol on Substances that Deplete the Ozone Layer.⁷⁷⁰ The Montreal Protocol, ratified by every member of the United Nations, states that signatories shall "adopt appropriate legislative or administrative measures and co-operate in harmonizing appropriate policies to control, limit, reduce or prevent human activities under their jurisdiction or control should it be found that these activities have or are likely to have adverse effects resulting from modification ... of the ozone layer."771

On 16 November 2017, Canada and the United Kingdom launched the Powering Past Coal Alliance, formed at the 23rd Conference of Parties talks in Bonn.⁷⁷² The alliance is committed to phasing out coal from power generation by 2030. The November 2017 UN Environment Programme report encouraged a "gradual coal phase-out" to support the "temperature goals of the Paris Agreement." 773

On 23 December 2017, Canada published a framework for a national clean fuel standard, which will reduce greenhouse gas emissions and encourage the use of cleaner energy sources and low carbon

fuels.⁷⁷⁴ The framework will establish fuel standards in transportation, industry, and buildings.⁷⁷⁵ The clean fuel standard will use a lifecycle analysis to measure the carbon intensity of fuel, incorporating the International Organization for Standardization standard IS/ISO-14040.⁷⁷⁶

On 6 January 2018, Canada published a proposed Prohibition of Asbestos and Asbestos Products Regulations and proposed amendments to the Export of Substances on the Export Control List Regulations.⁷⁷⁷ The regulations and amendments would prohibit the import and export of products with asbestos, with limited exceptions.⁷⁷⁸ These changes will be more comprehensive than the current Canadian asbestos standards. The regulations are to enter into force in 2019.⁷⁷⁹ These regulations go beyond the requirements of the Rotterdam Convention, a multilateral treaty which places restrictions on and bans certain hazardous chemicals, including asbestos.⁷⁸⁰

On 16 April 2018, Canada joined France in putting forward a statement of commitment to Paris Agreement.⁷⁸¹ Part of this statement included a commitment to supporting trade policies that promote high environmental standards.⁷⁸²

Canada has applied a number of internationally recognized environmental standards. It has also actively promoted environmental standards for the global economy and its supply chains.

Thus, Canada receives a score of +1.

Analyst: Julia Chen

France: +1

France has fully complied with its commitment to apply and promote internationally recognized environmental standards.

On 19 September 2017, France implemented the Global Pact for the Environment. The document shows France's will to promote, apply and guarantee environmental standards through their own initiative. The Global Pact sets a clearer understanding of what needs to be accomplished to guard environmental standards and to guide states performance, to increase countries ability to comply with the standards. The document is the first "international legally binding document gathering and harmonizing all environmental laws in one single document." Its objective is described as an

"essential tool for governments to help them implementing environmental rules and principles in their own country." 783

On 21 September 2017, the Canada–European Union Comprehensive Economic and Trade Agreement (CETA) between Canada and the EU was provisionally applied.⁷⁸⁴ CETA enables France to recognize the international environmental standards of the Organisation for Economic Cooperation and Development, the Rio Declaration on Environment and Development of 1992, and the Johannesburg Declaration on Sustainable Development of 2002.⁷⁸⁵

On 26 September 2017, French President Emmanuel Macron promoted an EU carbon tax on exports from countries with lower environmental standards. This initiative could incentivize increased application of internationally recognized environmental standards.

On 12 December 2017, Macron hosted a a climate summit in Paris in order to "create a counter momentum" to Trump's refusal to comply with environmental standards.⁷⁸⁷ The summit also urged state representatives and multinational organisations to make more sustainable use of natural resources.

On 10 March 2018, Macron issued a joint statement with Prime Minister Shri Narendra Modi reaffirming their commitment to various bilateral issues.⁷⁸⁸ Their joint statement acknowledged the importance of environmental standards in any connectivity initiatives between the two countries.⁷⁸⁹

On 16 April 2018, France and Canada acknowledged their shared commitment to the environment with the France Climate and Environment Partnership. As part of their joint commitment to promoting sustainable development issues in international bodies, France has stated support for trade policies that promote high standards and regulations in areas including the environment.

France has demonstrated initiatives to both promote and apply internationally recognized environmental standards.

Thus, France receives a score of +1.

Germany: +1

Germany has fully complied with its commitment to striving for better application and promotion of internationally recognized environmental standards throughout the global economy and its supply chains.

On 19 June 2017, German Chancellor Angela Merkel stated that the G20, of which all G7 countries are member, and all partner countries should support the multilateral system of the World Trade Organization, have common rules, and work to establish standards to protecting workers and consumers, as well as the climate and the environment.⁷⁹² This speech was a part of the G20 Dialogue Forum with Non-Governmental Organizations in Hamburg.

On 22 June 2017, Federal Minister for Economic Affairs and Energy Brigitte Zypries met with European Union Trade Commissioner Cecilia Malmström. The talks focused on the ongoing tradepolicy issues, where Zypries stated that high labour, consumer and environmental standards and a modern investment protection system combined with the ambitious opening of markets are the right approach towards inclusive growth and prosperity to benefit all sides.⁷⁹³

On 2 July 2017, before the G20 summit in Hamburg, Merkel said in her video podcast that global development will "certainly not be sustainable and inclusive if we simply continue doing things the way we have always done them." In her opinion, sustainable growth involves "climate agreements, open markets and better trade agreements that include consumer protection, social standards and environmental standards," which must be further developed step by step.⁷⁹⁴

On 11 July 2017, Merkel made a speech on "Prosperity for All. Social Market Economy," at the Political Forum in Ruhr. She stated that the United States and Germany could agree on high standards in the ecological area and social area, and thus comply with international standards, through an agreement between the EU and the US regarding free trade.⁷⁹⁵

From 6 to 17 November 2017, Germany hosted COP23 and announced an additional EUR 100 million to support developing countries in climate change adaptation. Federal Environment Minister Barbara Hendricks commented: "With this pledge of support, we are sending a clear signal that Germany stands in solidarity with those people and countries affected by climate change." With Federal President Steinmeier and French President Macron, Merkel called for resolute action at the COP23, "we need appropriate regulations. We in Europe are aware of our responsibility." She considered that the Climate Action Plan 2050 lays out Germany's long-term and medium-term strategy on being largely greenhouse gas neutral, and saving 80-95% carbon dioxide emissions. Merkel also commented: "We will only be able to preserve our prosperity in future if we make

extensive investments climate-friendly. That is why we are convinced that climate policy is also economic policy for the future."⁷⁹⁶

On 15 and 16 January 2018, the annual meeting of the Indo-German Working Group on Quality Infrastructure was held in New Delhi, India. The meeting was chaired by the Indian Ministry for Consumer Affairs, Food and Public Distribution and the German Federal Ministry for Economic Affairs and Energy, and it was two sides agreeing on strengthening key areas of trade by working more closely together on standardization, certification and market surveillance.⁷⁹⁷

Germany has demonstrated application and promotion of internationally recognized environmental standards. Thus, Germany receives a score of +1.

Analyst: Wilkey Rong

Italy: +1

Italy has fully complied with its commitment to promote and apply internationally recognized environmental standards.

On 20 October 2017, Prime Minister Paolo Gentiloni held talks with Indian leadership to strengthen bilateral relations. A joint statement acknowledged the importance of considering environmental standards in connectivity initiatives.⁷⁹⁸

On 13 November 2017, Italy's Lombardi regional government joined the BreathLife campaign.⁷⁹⁹ This campaign is a joint effort led by the World Health Organization and United Nations Environment Programme. By joining, the region has committed to setting up standards on emissions for both households and industries and regulating the disposal and management of solid waste.

On 20 November 2017, the Government of Italy and UN Climate Change signed a memorandum of understanding to launch a fellowship programme, aimed to help vulnerable countries, such as Small Island Developing States and Least Developed Countries, in combating the effects of climate change. 800 The Italian Government has agreed to provide EUR 2.5 million so that mid-career professionals, as fellows of the programme, can address the challenges of climate change at the

national, regional, and local, government level, building institutional capacity.⁸⁰¹ Fellows will also work with environmental regulatory issues pertaining to the Paris Agreement.⁸⁰²

On 16 March 2018, the council of ministers of the Italian government approved a measure to implement F-Gas regulation.⁸⁰³ The approved measure is a preliminary step to bringing Italy in line with the European Union's efforts to reduce the use of hydrofluorocarbons and involves regulation that better aligns with the standards of the Kigali Amendment to the Montreal Protocol.⁸⁰⁴

Through new initiatives that promote internationally recognized environmental standards, namely by capacity-building UN environment organizations to support implementation of internationally recognized environmental standards, and, by promoting recognized international environmental standards through the pledge to phase out coal power plants, Italy has fully satisfied the two necessary conditions of the commitment.

Thus, Italy has received a score of +1.

white paper, published earlier in June 2017, featured a chapter devoted to the SDGs⁸¹⁰ and has also decided to feature the topic in its "fifth basic plan for environmental protection," tentatively planned to be released by March 2018.

On 30 October 2017, Japan's MOEJ issued a press release titled, "Japan's Assistance Initiatives to Address Climate Change 2017," summarizing Japan's proposed actions for assisting developing countries in the Asia-Pacific region in "accelerating climate change measures and sustainable development." The proposed actions are a framework designed as a follow-up to Japan entering the internationally recognized Paris Agreement in 2016. The framework aims to not only "achieve the goals" as outlined in the agreement, such as "diminish [ing] greenhouse gas emission," but also to pursue development in accordance to what is outlined in the international standards of the SDGs. The summary of initiatives also places emphasis on collaboration between "important state and non-state actors" and clarifies that the projects undertaken as per the initiatives are based on the three principles of "adaptation, mitigation, and transparency." More specifically, Japan plans to establish the "Partnership to Strengthen Transparency for Co-Innovation," as part of the initiative to push for transparency in environmental regulation and development.

On 14 November 2017, Prime Minister Shinzo Abe announced that Japan will provide support in fields relating to the environment and welfare to help countries in Southeast Asia to "achieve UN-set Sustainable Development Goals." The comments were made in a meeting in Manila alongside various leaders from the Association of Southeast Asian Nations (ASEAN), as well as the Chinese Premier Li Keqiang and South Korean President Moon Jae In. Abe also stated that Japan would specifically help "ASEAN environment preservation efforts" by providing support going towards infrastructure and related projects. 822

On 15 November 2017, the MOEJ announced that the Government of Japan would be contributing USD5 million, with specifically USD 1.67 million coming out of the MOEJ, towards the Capacity Building Initiative for Transparency (CBIT).823 The press statement describes the CBIT as a fund to "support capacity building"824 for accounting greenhouse gas emissions to secure "transparency of mitigation measures"825 in developing countries. This follows the proposed initiatives put out by MOEJ one month prior in efforts to reach the targets outlined in the Paris Agreement. It also employs "effective utilization" of the CBIT to comply with the standards of the Paris Agreement. It was announced that Japan will be partnering from here on with the Global Environment Facility.826

On 16 November 2017, Japanese Environment Minister Masaharu Nakagawa unveiled a new plan at the 23rd Conference of the Parties for the launch of a satellite that would help track greenhouse gas emissions. 827 The satellite, named "Ibuki," will be used to assist developing countries more "accurately predict,"828 measure, and report their greenhouse gas emissions, a practice which has been globally agreed upon as a standard under the Paris Agreement. 829 For many developing countries with smaller economies, such an endeavour is difficult due to a lack of a "reliable system,"830 and thus it becomes similarly difficult to verify any self-reported data to see whether countries are actually "hitting their reduction targets."831 In order to demonstrate continued support for the Paris Agreement, Japan is committing to not only provide the Ibuki satellite to calculate emissions data for developing countries, but also to extend support and guidance in "craft[ing] plans to achieve ... emission-cut targets."832 The satellite is planned to be launched in the "fiscal year through March 2019."833

On 5 April 2018, a Tokyo metropolitan government survey conducted at the location of the planned Toyosu food market in Tokyo revealed that benzene levels in the groundwater were approximately

130 times that set by environmental standards.⁸³⁴ Additionally, high levels of other harmful material such as arsenic and cyanogen were reported, although above-ground conditions, such as in air quality, were reported to be within acceptable standards as per environmental regulations. The most recent survey however, shows an improvement from the last one conducted in September 2017, where levels of benzene were at "160 times the limit."⁸³⁵ The Tokyo metropolitan government also issued a statement reaffirming its commitment to improve the "quality of groundwater in the medium to long term,"⁸³⁶ by means such as strengthening groundwater control systems.⁸³⁷

Japan has both taken steps to promote future support in relation to environmental issues throughout the global economy and supply chains and has also actively made efforts in application, providing technical assistance, capacity building, as well as guidance and support.

Thus, Japan receives a score of +1.

Analyst: Apanuba Mahmood

United Kingdom: +1

The United Kingdom has fully complied with its commitment to strive "[for better application and promotion of internationally recognized] environmental standards [throughout the global economy and its supply chains]."

On 11 October 2017, the Department for Business, Energy and Industrial Strength introduced the Nuclear Safeguards Bill. This bill was drafted following the Brexit vote, which requires the UK to leave the existing European Atomic Energy Community. This bill outlines the responsibilities the UK must uphold regarding nuclear regulation, including how to safely handle nuclear energy in regards to global trade relations and environmental safety, specifically as they related to environmental standards in national and international trade.⁸³⁸

On 11 October 2017, the government announced making up to GBP 557 million available for renewable energy projects, complementing the Clean Growth Strategy with significant financial commitments. Such projects could focus on a variety of business sectors, with the ultimate goal of reducing carbon emissions and energy bills, while continuing to allow the British economy to flourish. The official announcement on 12 October 2017 of the Clean Growth Strategy saw further financial commitments. This included investing GBP 1 billion to support the creation and promotion of ultra-low emission vehicles, as well as "helping consumers to overcome the upfront cost of an electric car," and a total of GBP 2.5 billion in government investment geared towards low carbon

innovation initiatives between 2015 and 2021.840 This also includes GBP 505 million being put towards further commercialization of "innovative clean energy technologies and processes" in business, both nationally and internationally. These financial contributions demonstrate that the UK is not only promoting environmental standards in business and trade but that it is committed to the actual application of environmental standards by ensuring they are well funded.841

On 12 October 2017, the UK's Minister for Climate Change and Industry Claire Perry announced the official publication of the Clean Growth Strategy. The goal of this strategy was ultimately to lower carbon emissions, while still "creating good jobs and growing the economy." This announcement included promises to reduce carbon emissions by 80% by the year 2050, the creation of an industrial energy efficiency scheme geared towards lowering power bills for companies and continued support for the Renewable Heat Incentive. One of the major aims of this strategy is ensuring businesses in the UK comply with internationally recognized environmental standards, whether business is completed domestically or abroad.^{842,843}

On 26 October 2017, the UK Environment Secretary Michael Gove announced the launch of the Cefas-Exeter collaborative centre for Sustainable Aquaculture Futures. The overall goal of this centre is to promote sustainable and environmentally friendly aquaculture. By working towards a more sustainable aquaculture sector, the UK hopes to not only further protect the aquatic environment but to provide a "sustainable supply of food," while bettering the economy surrounding aquaculture. Projects run by this centre will include aquaculture health products in India, Bangladesh, and Malawi; projects focusing on controlling disease in aquaculture; and funding PhD studentships for those studying aquatic animal health and food safety between 2015 and 2020. This centre and its accompanying initiatives demonstrate a commitment to furthering the research, development and application of environmental standards in a variety of economic sectors.⁸⁴⁴

On 11 November 2017, the Environment Minister for the United Kingdom gave a speech at the UN Climate Change Conference in Germany. Amongst voicing general support for initiatives working to protect the environment and the global economy, the UK committed at least GBP 5.8 billion of international climate finance to help developing countries cope with and adapt to the impacts of climate change between 2016 and 2020. The UK's commitment to upholding internationally recognized environmental standards also extends beyond their own borders. Ensuring that other countries that they do business with commit to applying environmental standards ultimately demonstrates the UK's own commitment to these environmental standards.⁸⁴⁵

On 14 November 2017, the UK ratified a new agreement focusing on tackling global warming, specifically through lowering carbon emissions. The United Nations Montreal Protocol focused on tackling global warming, and specifically, the Kigali amendment demonstrates a commitment to reducing hydrofluorocarbon greenhouse gases by 85% between 2019 and 2036. This amendment was proposed in October 2016, and as of November 2017, the UK was one of the first countries to ratify this amendment to the agreement fully. Many industries have large carbon emissions, and working to lower them demonstrates a commitment to environmental standards.⁸⁴⁶

On 11 January 2018, Prime Minister Theresa May introduced a 25 year plan of the environment.⁸⁴⁷ Part of the plan includes working to maintain environmental standards as the UK leaves the EU and setting up an environmental watchdog to uphold standards.⁸⁴⁸

On 19 January 2018, the Department for Business, Energy and Industrial Strength released a document outlining the planned changes to their methodology to better reduce greenhouse gas emissions in the UK. In order to explain why certain choices have been made, this document outlines trends in greenhouse gas emissions over the years, to determine which methodologies should be modified. Changes outlined by this document include those regarding landfill waste, harvested wood products, and agricultural models; such changes will allow for more sustainable business practices.⁸⁴⁹

On 20 February 2018, Secretary of State for European Union David Davis spoke in Vienna on the importance of UK leadership in standards.⁸⁵⁰ Part of his address noted the UK's commitment to environmental standards, mentioning plans to have an independent body to uphold environmental standards after the UK leaves the EU.

The UK's actions have demonstrated that it is actively promoting and applying internationally recognized environmental standards, throughout the global economy and its supply chains.

Thus, the UK received a score of +1.

Analyst: Kendra Dempsey

United States: -1

The United States has not complied with its commitment to strive for better application and promotion of internationally recognized environmental standards throughout the global economy and its supply chains.

On 11 July 2017, US House of Representatives appropriators released a bill that would decrease funding to the Environmental Protection Agency (EPA), a national environmental standard-setting body, by USD 528 million from current levels.⁸⁵¹ This would reduce the EPA's ability to apply internationally recognized environmental standards within the US.

On 20 November 2017, the US Senate Committee on Appropriations introduced a bill that would decrease EPA funding by USD 149.5 million from current levels.⁸⁵² This would also reduce the EPA's ability to apply internationally recognized environmental standards within the US.

On 2 April 2018, Environmental Protection Agency Administrator Scott Pruitt announced roll back of emission standards put in place from the Obama administration. These standards pertain to emissions for cars and light trucks.⁸⁵³

The US has initiated actions to reduce its domestic capability to apply internationally recognized environmental standards.

Thus, the US receives a score of -1.

Analyst: Miriam Lustig

European Union: +1

The European Union has fully complied with its commitment to better apply and promote internationally environmental standards throughout the global economy and its supply chains.

On 11 July 2017, the EU published a non-paper on trade and sustainable development in EU trade agreements outlining the Commission's continued commitment to a fair, international, rules-based order based on high standards, cooperation and strengthening of multilateral institutions.⁸⁵⁴ The paper evaluates current practices as well as proposed improvements for better implementation of standards.

On 6 October 2017, Commissioner Cecilia Malmström met with 70 participants of different civil societies to discuss certain trade and sustainable development issues. Malmström said: "I think that the most fundamental issue is what is actually working and what isn't, and what tools do we need to address that? We have to remember that enforcement is not an end in itself, but a means to strengthen legislation and improve effective implementation of labour and environmental standards."855 Topics discussed included: the role of civil society in monitoring the implementation of trade agreements; how to make complaints relating to trade and sustainable development; the links

⁸⁵⁵ Commissioner Malmström meets with civil society on trade and sustainable development issues, European Commission Trade (Brussels) October 6 2017. Access Date: November 19

^{2017.} http://trade.ec.europa.eu/doclib/press/index.cfm?id=1739&title=Commissioner-Malmstr%C3%B6m-meets-with-civil-society-on-trade-and-sustainable-development-issues.

between trade deals and the United Nations and the International Labour Organization, and how to reinforce the system at the multilateral level.⁸⁵⁶

On 7 November 2017, the European Commission committed almost EUR 25 million from the European Regional Development Fund to the remediation of acid tar ponds in Inčukalns, Latvia.⁸⁵⁷ The aim of the project is to prevent acidic infiltration into groundwater and to rehabilitate the site, therefore protecting the health of the inhabitants and the environment. A monitoring system for the water quality of groundwater and the environment will be set up as well.⁸⁵⁸ This complies with guidelines outlined by the World Health Organization for the safe use of wastewater, excreta and greywater, specifically monitoring and system assessment ⁸⁵⁹ as well as those outlined by the International Standards Organization on sludge recovery, recycling, treatment and disposal.⁸⁶⁰

On 12 December 2017, the EU announced its upcoming plans on sustainable finance including EU standards and labels for green bonds and green investment funds.⁸⁶¹ This further shows the promotion of international standards to promote climate bond standards.

On 19 January 2018, new measures to help member states comply with environmental laws were announced at an air quality ministerial summit. R62 In 23 out of 28 member states, air quality standards were not being complied with. Consequently, the Commission has taken legal action against member states over poor air quality since 2008. This represents promotion of international environmental standards outlined by the World Health Organization on particulate matter, ozone, nitrogen dioxide and sulfur dioxide. R63

The EU has fully complied with its commitment. The EU has consistently promoted and applied internationally recognized environmental standards throughout the global economy and its supply changes.

Thus, the EU received a score of +1.
